Using Jun's Garden

A picture for every step. The pictures come from a test copy of the garden with made-up sample plants, so your plants and names will look different. Big picture = computer, small picture = phone. The thing to look at has an orange frame.

This is the whole manual: every page of the website, every tab of the admin page, the phone app and the garden computer. Read the parts you need; the contents below link to each one. Two parts at the end are still being built and say so.

1. Signing in, and your password
2. Getting around: the top bar, colours and the bottom of the page
3. The home page
4. The Full Catalog
- 4.1 What you see first
- 4.2 The search box and its suggestions
- 4.3 A–Z and the Quick Search drop-downs
- 4.4 Views (signed in) and QR tags
- 4.5 Bed Search
- 4.6 Card Theme, Layout and Effect
- 4.7 The order of the cards
- 4.8 A plant card, piece by piece
- 4.9 The plant window
- 4.10 The owner's buttons (signed in)
- 4.11 The main photo and its focus point (owner only)
- 4.12 Moving many plants at once: Bulk Move
- 4.13 The Add / Edit box at the top (signed in)
- 4.14 The Source link
- 4.15 What the facts mean

5. Search, on every page
- 5.1 Quick Search and the Full Catalog
- 5.2 What the Full Catalog's search looks in
- 5.3 The Quick Search page
- 5.4 Search in other places

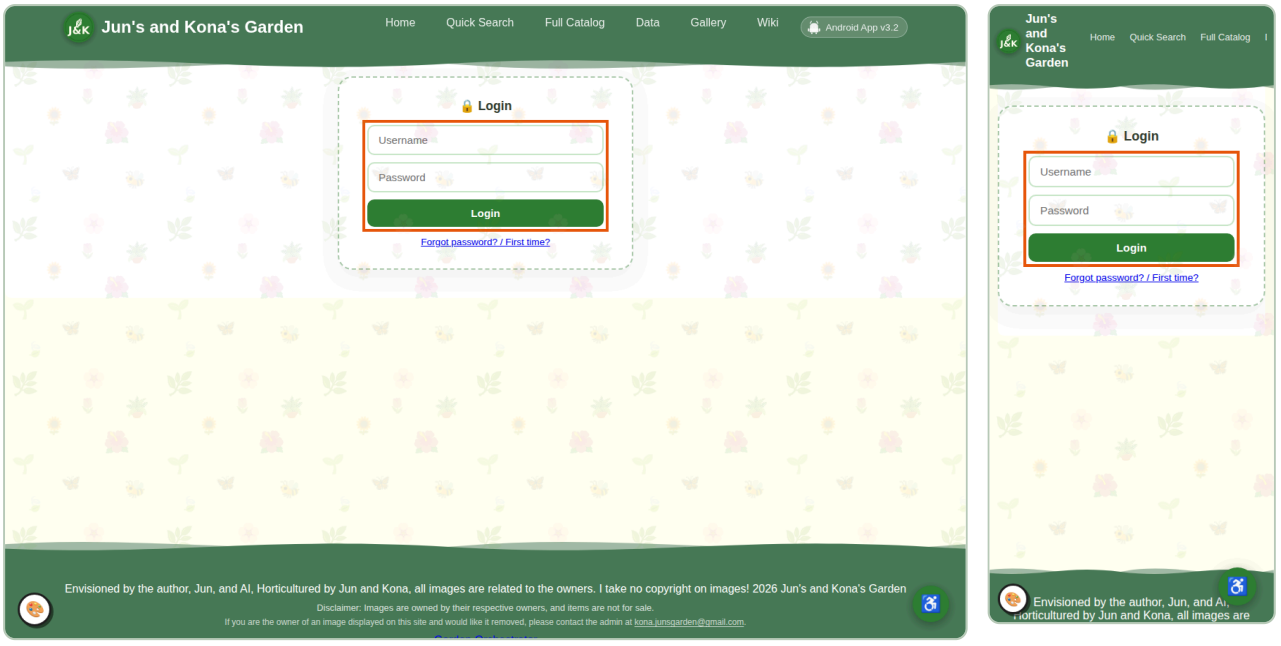

6. Adding a plant
7. Editing a plant
8. Removing a plant (it died, or you gave it away)
9. Photos
10. The admin page, tab by tab
- 10.1 The AI tabs: Manual Review, Fill Missing Data, AI — Missing Only

10.2 Checking the data: Partials, Awaiting Approval, Fully Approved, Flagged
10.3 The JSON Pipeline (many plants at once)
10.4 Bed Assignment, Wishlist, Barcodes
11. Beds and bed labels (QR codes)
12. Comments and the guestbook
13. The Gallery
14. The Data page
15. The Help pages
16. The phone app
17. Changing the garden's web address
18. The garden computer: menu, backups and settings
18.1 Every day
18.2 Backups (menu 6)
18.3 Settings (menu 8), people (U), keys (K) and more
19. Coming soon
19.1 Adding a plant with the garden's own AI, and the Approve button
19.2 The best main photo and focus point, chosen for you

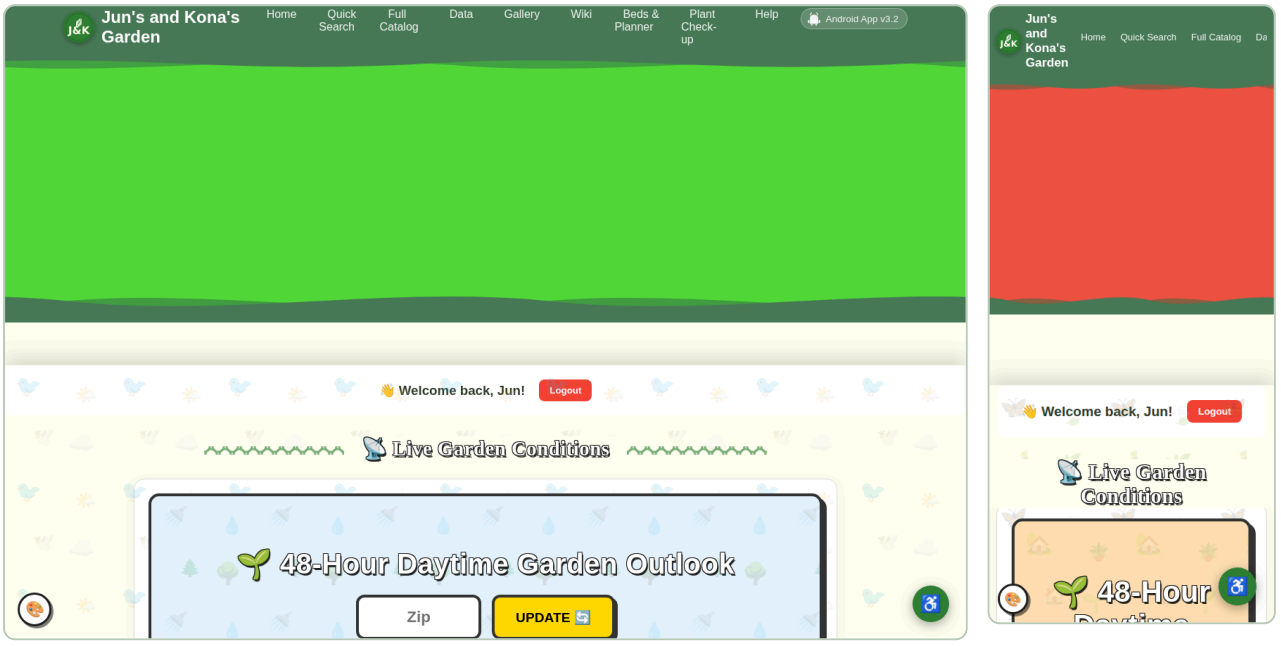

1. Signing in, and your password

Anyone can look at the garden. To add or change plants, sign in.

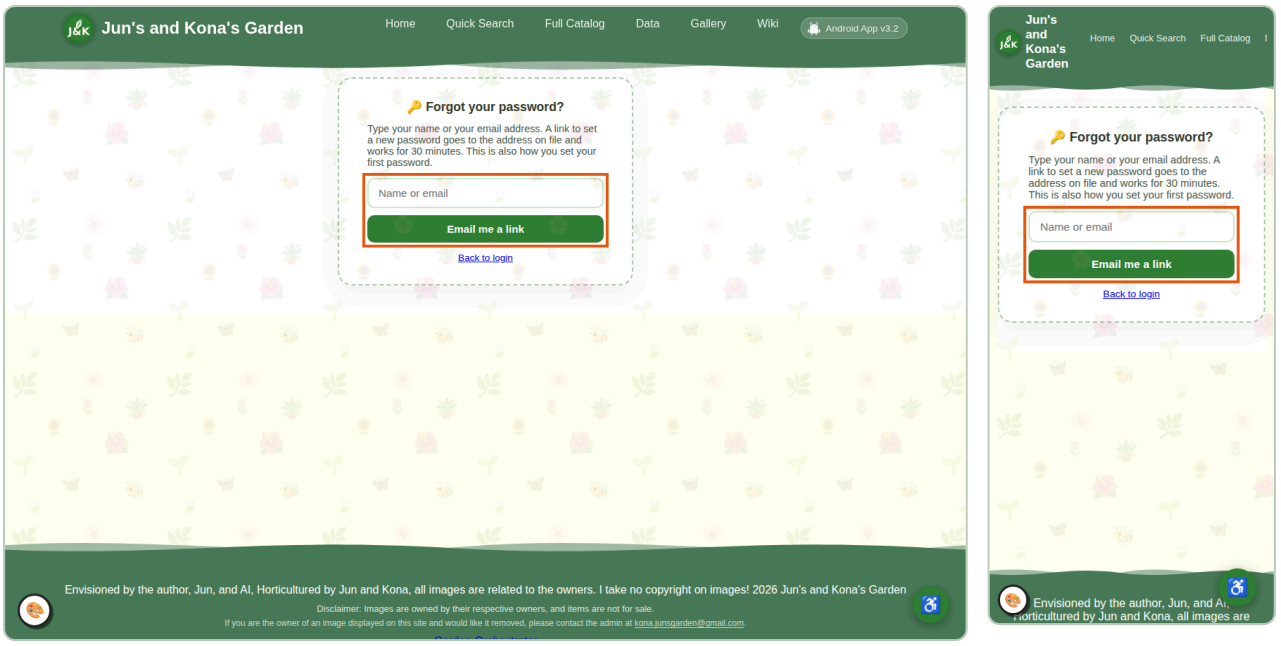

1. Open your garden's web address. The home page has a login box: type your name (**Jun**) and your password and press **Login**. (The same box is on its own page, `/login.php`.)

2. Signed in, the home page says **Welcome back, Jun!**, and the admin pages open for you.

3. **Forgot your password, or the first time?** On the login page choose **Forgot password? / First time?**. Type your name; a link to set a new password goes to your email.

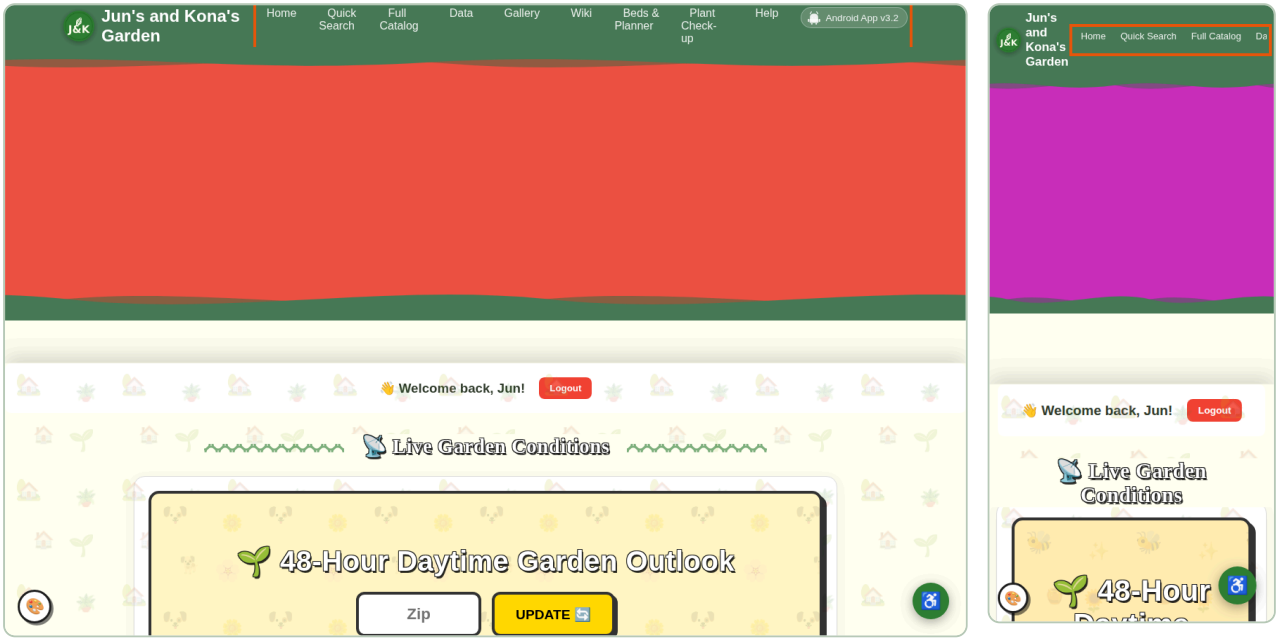

On the garden computer you can also set it any time: `bash garden.sh password` *(or the menu, U, then 5).*

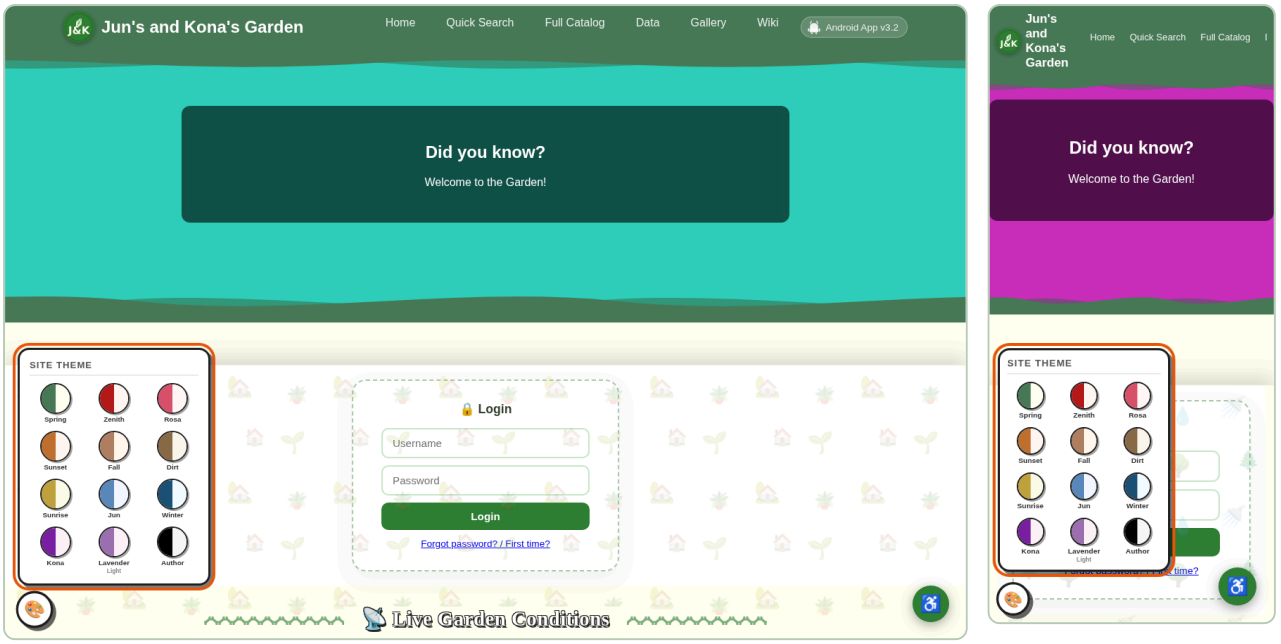

Signing out: the **Logout** button is on the home page, at the top right of the Full Catalog and in the admin page's left column.

2. Getting around: the top bar, colours and the bottom of the page

1. **The top bar** is the same on every page: **Home**, **Quick Search**, **Full Catalog**, **Data**, **Gallery** and **Wiki** (your garden encyclopedia, when it is set up). Signed in, you also see **Beds & Planner** and **Plant Check-up** (the garden tools, chapter 11) and **Help** (the guides, chapter 15). **Android App** at the end downloads the phone app; its number is the newest version. On a phone, slide the bar sideways to see all of it.

2. **Colours:** the round 🎨 button at the bottom left opens **Site Theme**: twelve colour sets (Spring, Zenith, Rosa, Sunset, Fall, Dirt, Sunrise, Jun, Winter, Kona, Lavender, Author). Tap one and the whole site changes. Your choice is remembered on that computer or phone.

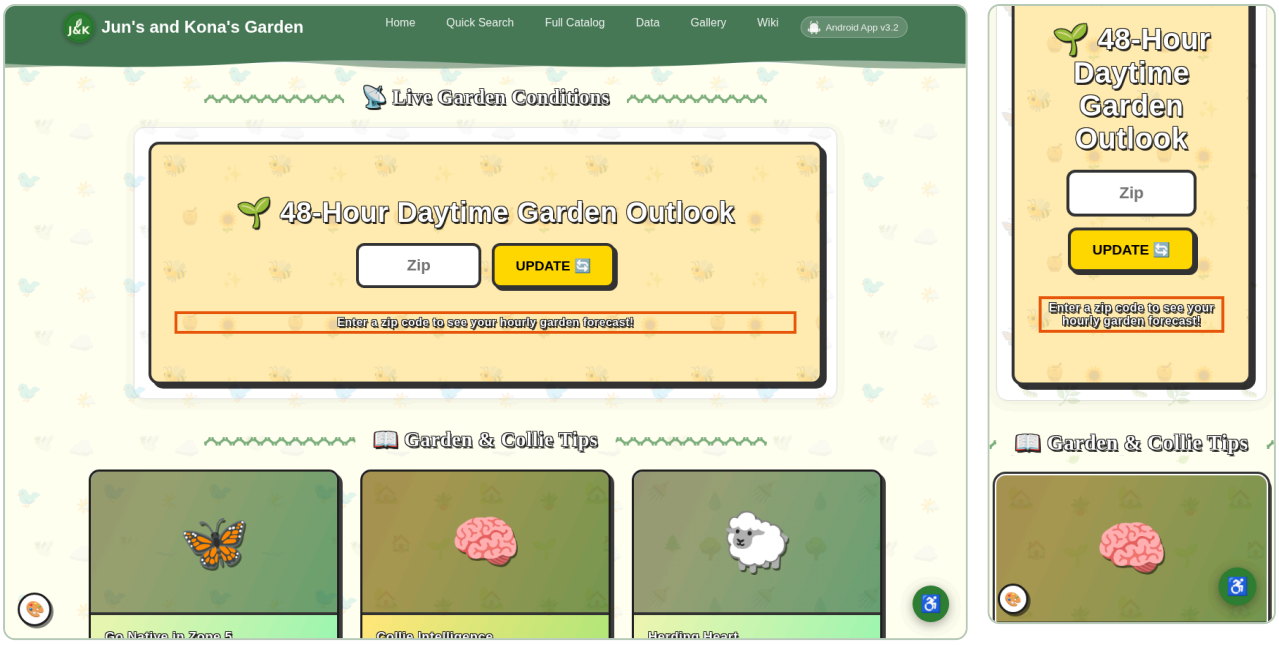

3. **Easier reading:** the round ♿ button at the bottom right: **Reduce Motion**, **Grey Scale**, **High Contrast**, **Large Text** and **Enhanced Focus**. Also remembered on that computer or phone.
4. **The bottom of every page** has the credits, the privacy note (**Privacy Policy**: the site keeps no personal data) and a link to the admin page (**Garden Orchestrator**).

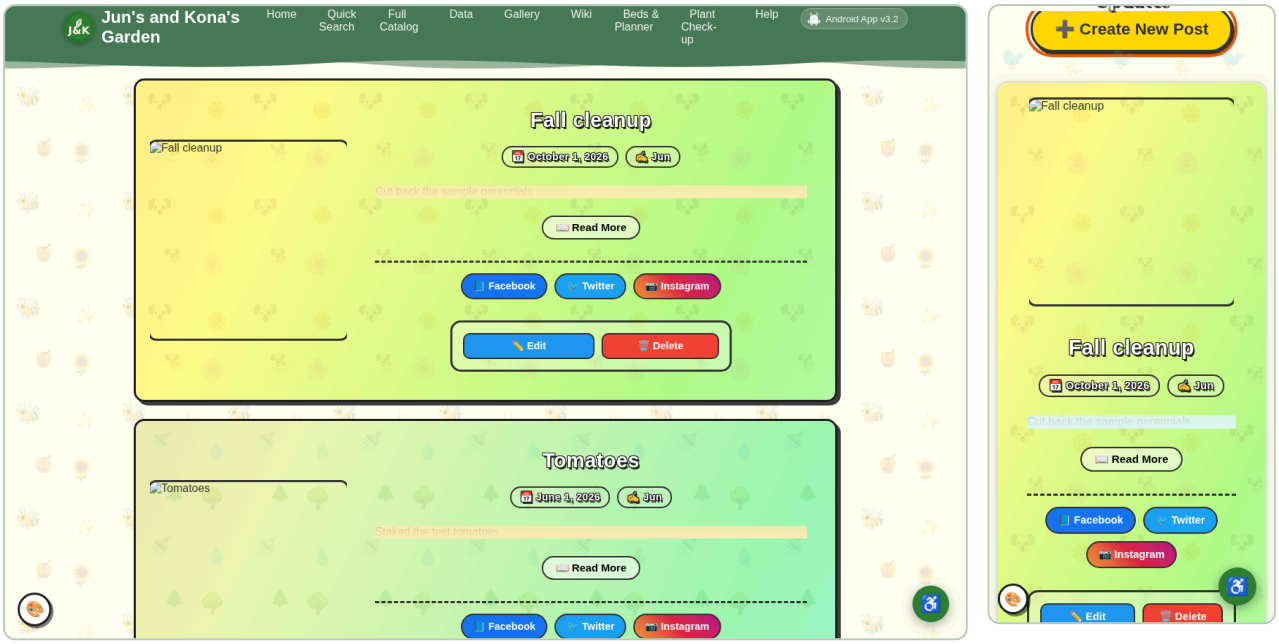

3. The home page

The home page, from top to bottom: a "Did you know?" banner, the login box (or **Welcome back** when you are signed in), the garden weather, tip cards, the newest garden posts and the guestbook.

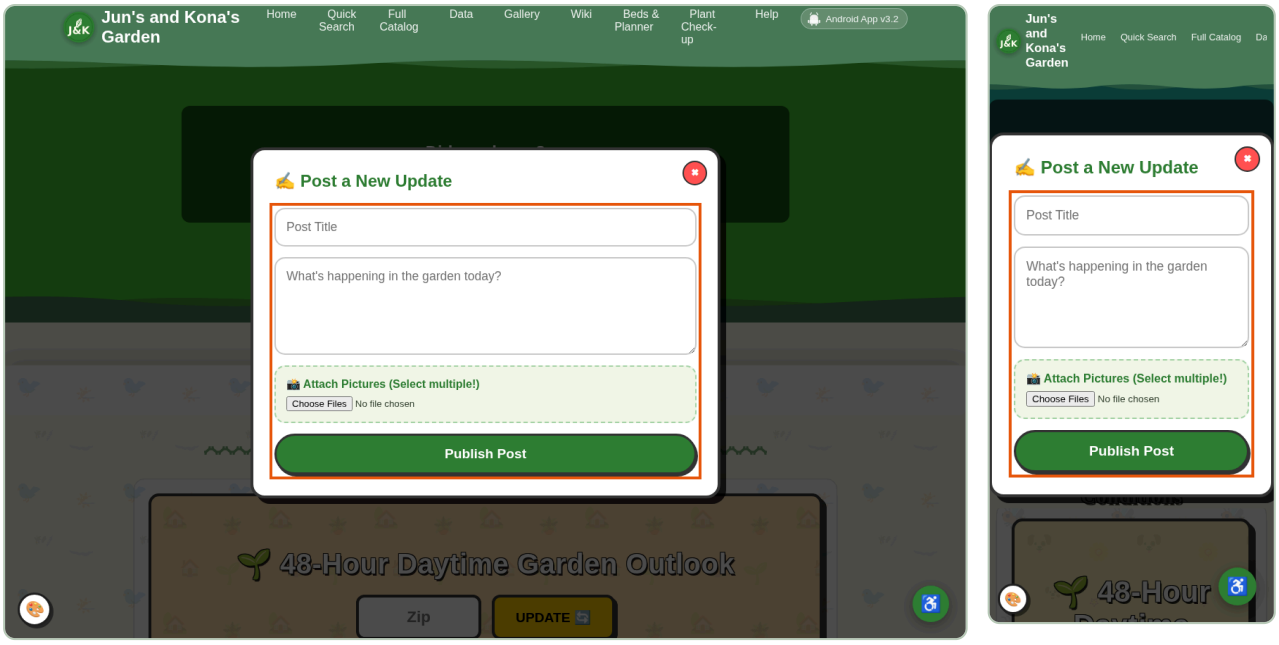

1. **Live Garden Conditions:** the **48-Hour Daytime Garden Outlook**. Type a zip code and press **UPDATE** 🔄 to see the hourly garden weather for that place.

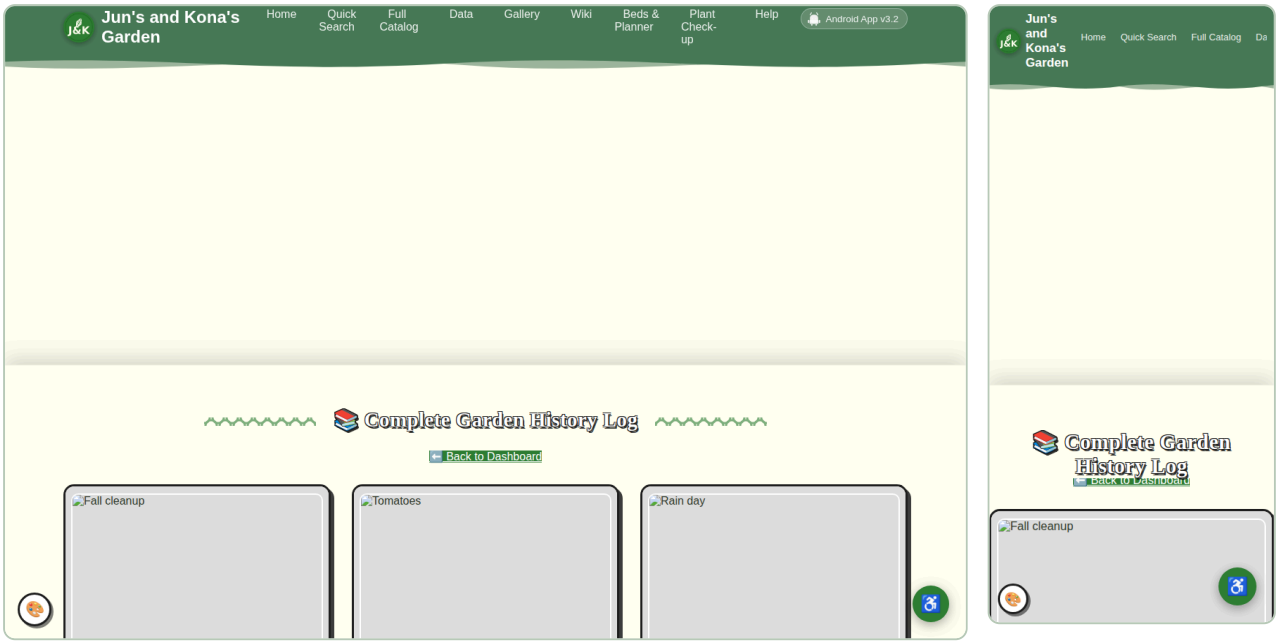

2. **Garden & Collie Tips:** three tip cards, picked at random on each visit.
3. **Garden News & Updates:** the three newest posts. Signed in, you see ➕ **Create New Post** above them and ✏️ **Edit** and 🗑️ **Delete** under each one. Visitors can share a post with the **Facebook**, **Twitter** and **Instagram** buttons, and 📖 **Read More** opens a long post.

4. **Writing a post:** press ➕ **Create New Post**. Give it a title, write what is happening, add photos if you like (several at once; they are made smaller for the web as they arrive) and press the button at the bottom. ✏️ **Edit** opens the same window for an older post.

5. 📂 **Open Complete Garden Archive** (under the posts) opens the **Complete Garden History Log**: every post ever written, newest first. Signed in, each post has 🗑️ **Delete Post**.

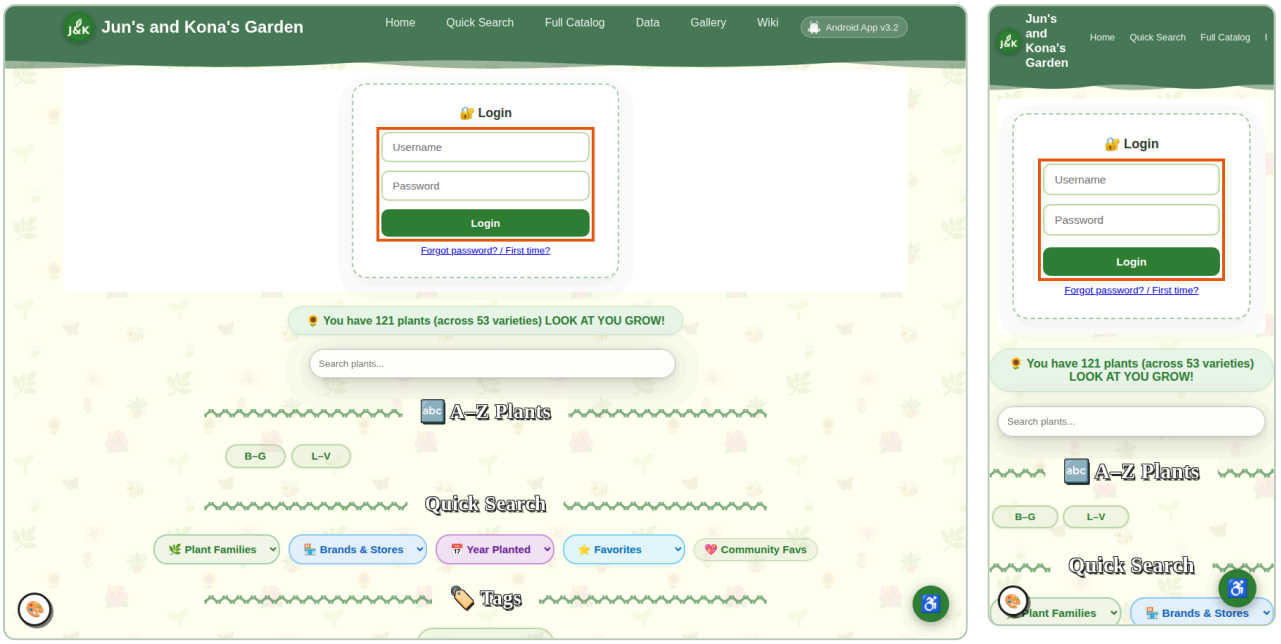

6. **The guestbook** is at the very bottom (chapter 12).

4. The Full Catalog

Full Catalog is the heart of the garden: every plant as a card, with search, filters and colours. Everyone can look; signed in, you also get the owner's buttons.

4.1 What you see first

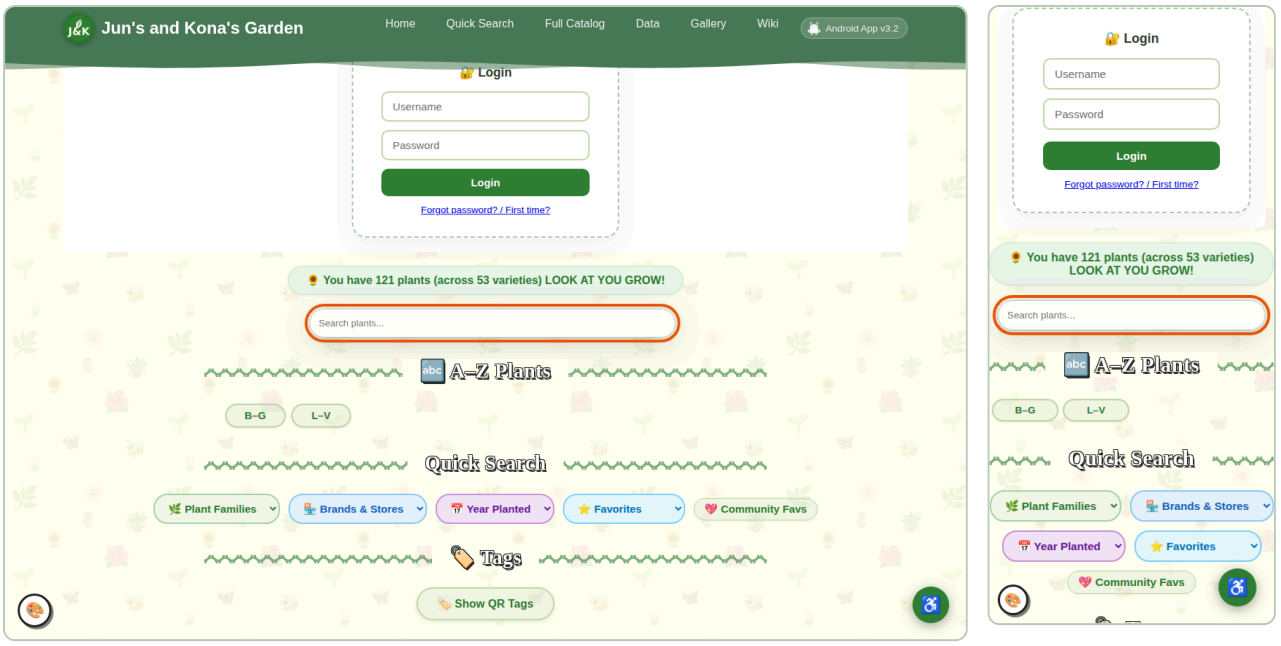

1. **Visitors** see a login box at the top (the same login as on the home page). Signed in, that place holds the 🪴 **Add / Edit Plant** box instead (section 4.13).

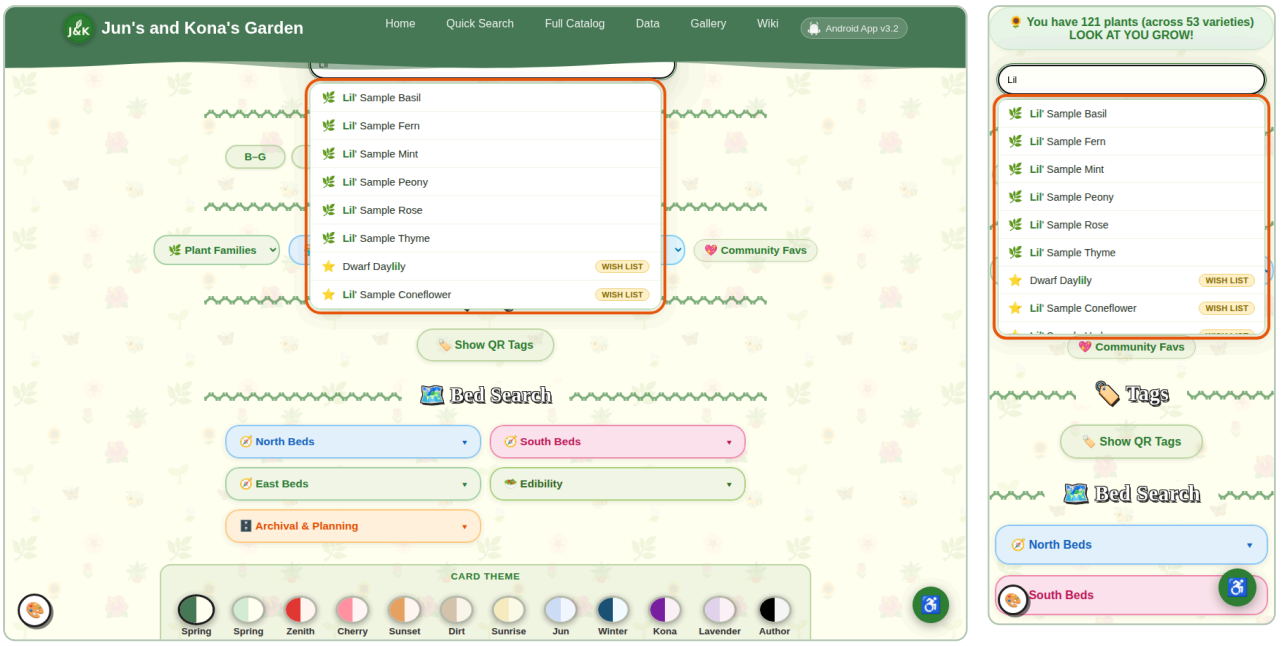

2. Under it, a green pill counts your garden: **You have N plants (across M varieties)**. "Plants" counts every living plant by its quantity; "varieties" counts the different plant records. Dead and removed plants are not counted.
3. Then come, in this order: the **search box**, **A–Z Plants**, **Quick Search** (drop-downs), **Views** (signed in only), **Tags**, **Bed Search**, the **Card Theme** box, and the cards.

4.2 The search box and its suggestions

1. Type in **Search plants...** and press **Enter**: the cards change to the plants that match.

2. After two letters a list of **suggestions** opens: 🌿 a plant, 🍃 a plant family, 🏪 a brand or store, ⭐ a wish-list plant (marked **WISH LIST**). Click one, or move with the arrow keys and press **Enter**. **Esc** closes the list.

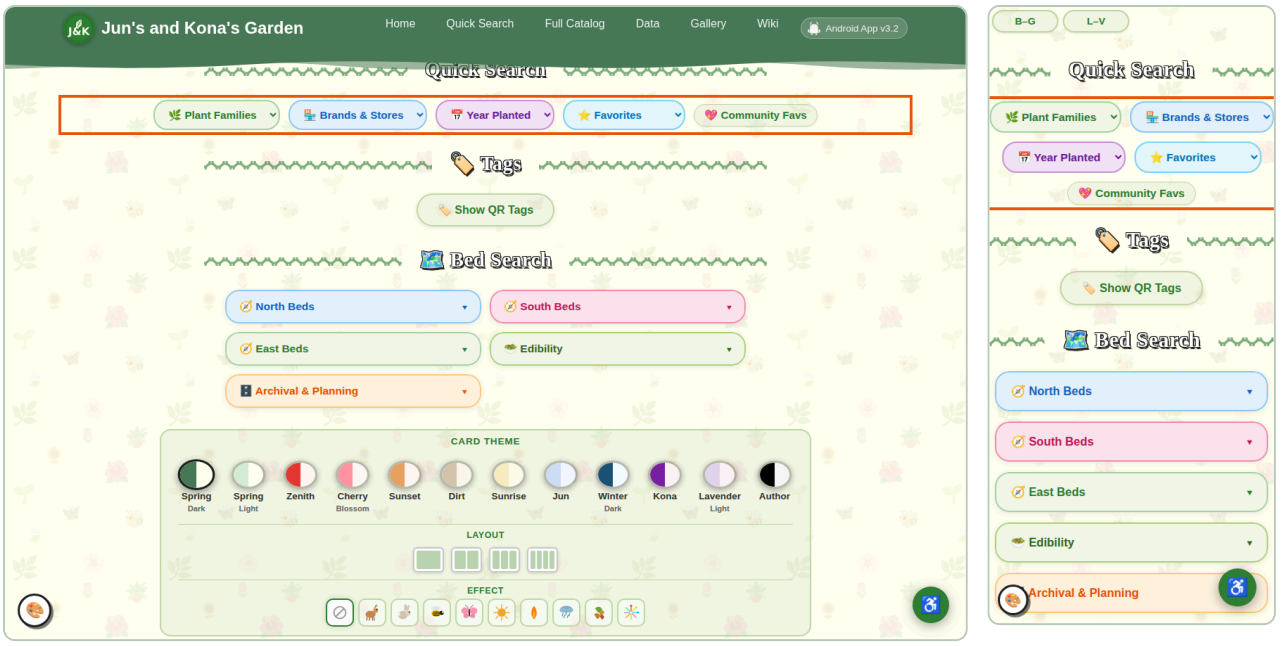

3. To see every plant again, empty the box and press **Enter**.

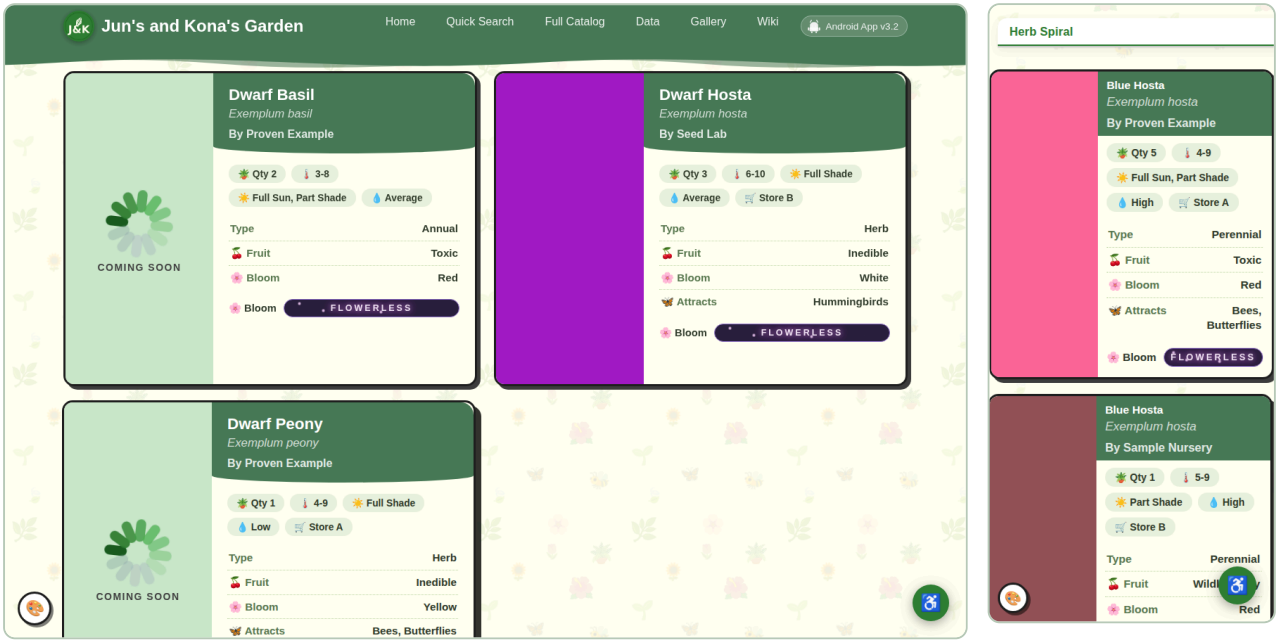

Chapter 5 says exactly what the search looks in, with tips.

4.3 A–Z and the Quick Search drop-downs

1. **A–Z Plants:** buttons such as **B–G** or **L–V**. Letters with few plants are put together so each button holds about 20 plants. A button shows the plants whose name starts with those letters, sorted by name (dead and removed plants left out). Hold the pointer on a button to see how many it holds.

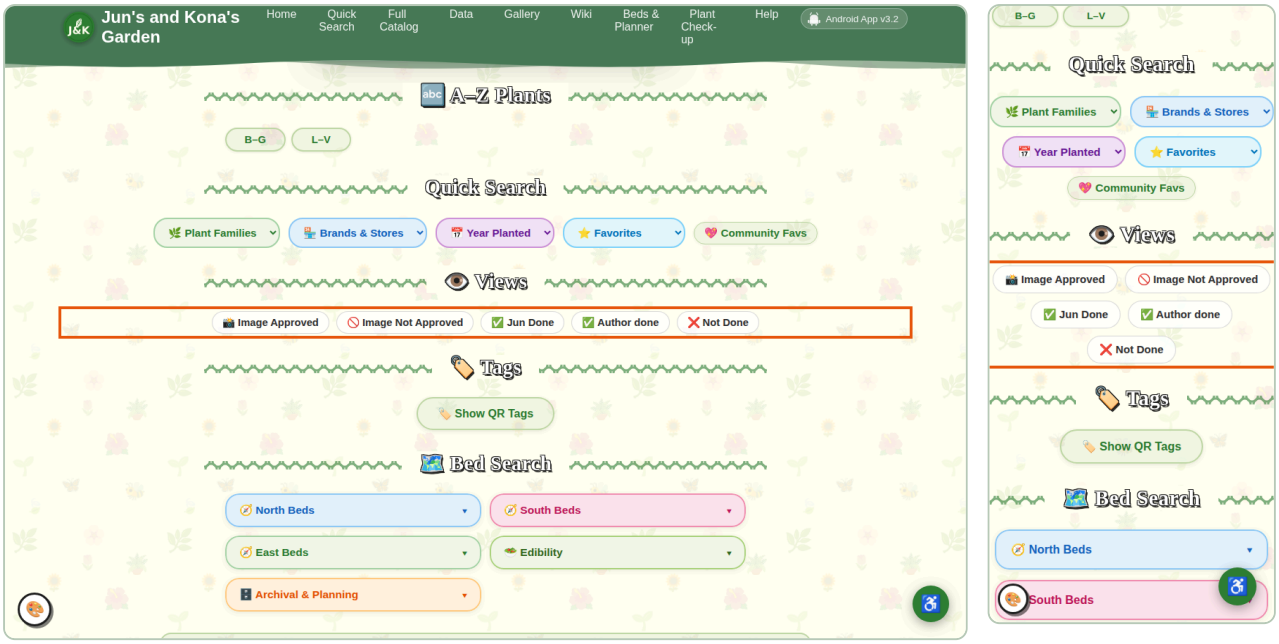

2. **Quick Search** has four drop-downs and a button. Each choice simply runs a search for you:
3. 🌿 **Plant Families:** Coleus, Evergreens, Heuchera, Hostas, Hydrangeas, Japanese Maples, Phlox, Roses.
4. 🏪 **Brands & Stores:** the growers and shops (for example Proven Winners, Monrovia, Home Depot).
5. 📅 **Year Planted:** a year from 2021 to 2026.
6. ⭐ **Favorites:** ⭐ **Jun's Favs**, ⭐ **Author's favs**, 🐾 **Kona's Favs**: the plants on that person's favourites list (the ☆ star in a plant's window, section 4.9).
7. 💖 **Community Favs:** plants that visitors and other accounts have starred.
8. After an A–Z button the cards are in name order:

4.4 Views (signed in) and QR tags

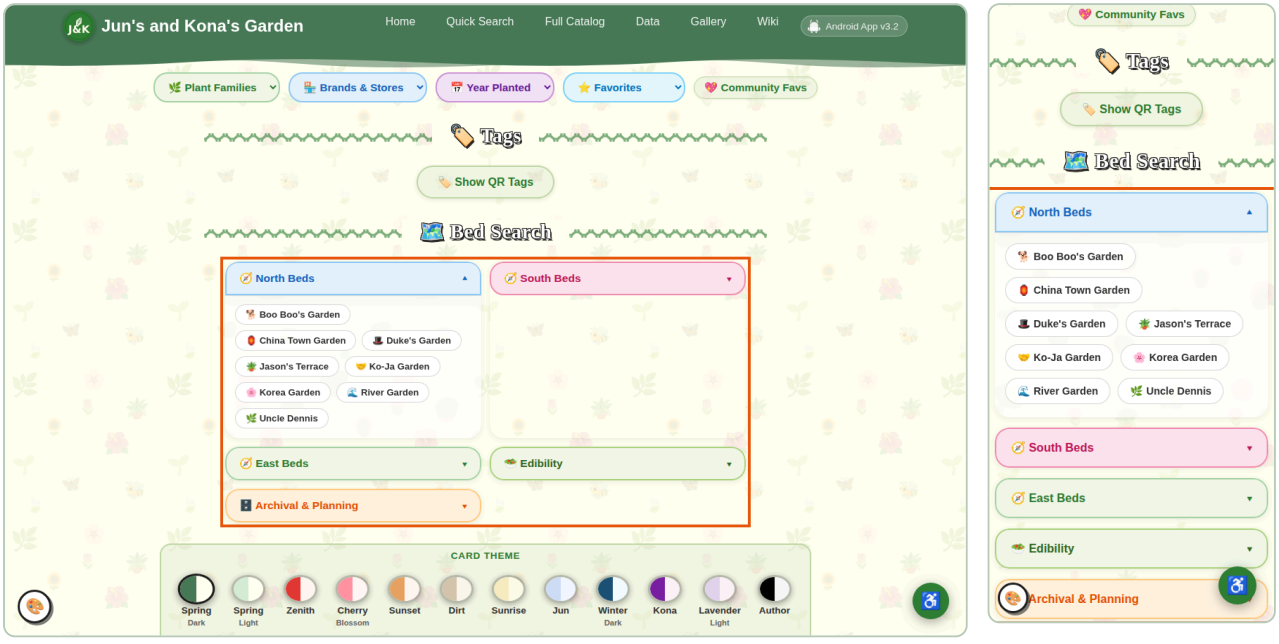

1. 👁️ **Views** (only when signed in) show plants by their review state: 📸 **Image Approved** / 🚫 **Image Not Approved** (has the photo been checked?), ✅ **Jun Done** / ✅ **Author done** (the plants that person ticked as done), and ❌ **Not Done** (the plants *you* have not ticked yet).

2. 🏷️ **Show QR Tags** shows a QR code for every living plant, right on the page. Press it again to hide them. (For printing, the labels page is better: chapter 11.)

4.5 Bed Search

1. Five groups open with a tap: 🧭 **North Beds**, 🧭 **South Beds**, 🧭 **East Beds**, 🥗 **Edibility** and 🗄️ **Archival & Planning**. Only one group is open at a time. Tap a bed to see its plants.

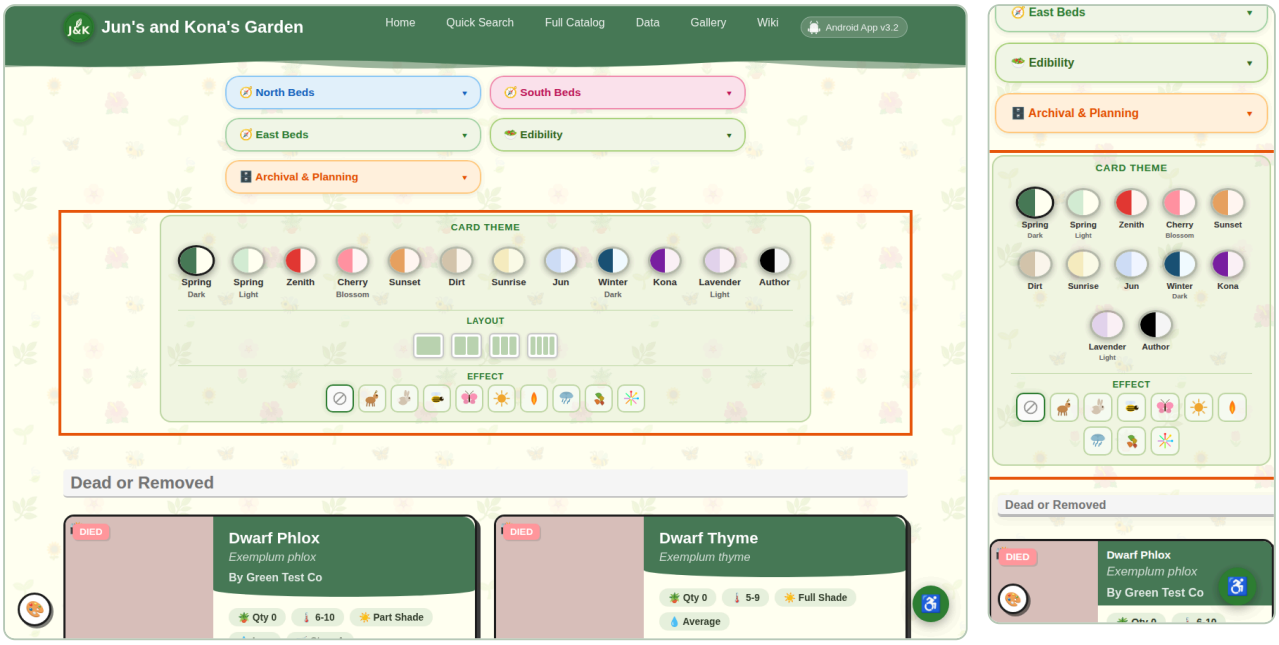

2. 🥗 **Edibility** sorts plants by what is safe to eat:
3. 🍽️ **Fully Edible:** the fruit is edible and the plant is non-toxic.

4. 🥗 **Semi Edible:** the fruit is edible, but the plant is toxic to dogs (eat with care).
5. 🦜 **Wildlife Only:** the fruit is for birds and animals, not people.
6. ☠️ **Completely Toxic:** toxic fruit, or toxic to humans.
7. 🗄️ **Archival & Planning:** 💀 **Dead / Removed**, 📬 **To Be Sorted** (plants with no bed yet) and 🌠 **Wishlist** (plants you want but do not have yet).

4.6 Card Theme, Layout and Effect

The **Card Theme** box above the cards changes how the cards look. It is remembered on that computer or phone and, when you are signed in, for your account on every device.

1. **Card Theme:** twelve colour sets for the cards: Spring (Dark), Spring (Light), Zenith, Cherry (Blossom), Sunset, Dirt, Sunrise, Jun, Winter (Dark), Kona, Lavender (Light), Author. (The 🎨 button of chapter 2 colours the rest of the site; the two are chosen separately.)
2. **Layout:** one, two, three or four cards side by side. On a phone the cards are always one under the other.
3. **Effect:** a little animal or weather that follows the pointer over the cards, just for fun: none, deer, rabbit, bees, butterflies, drought, fire, flood, leaves, fireworks.

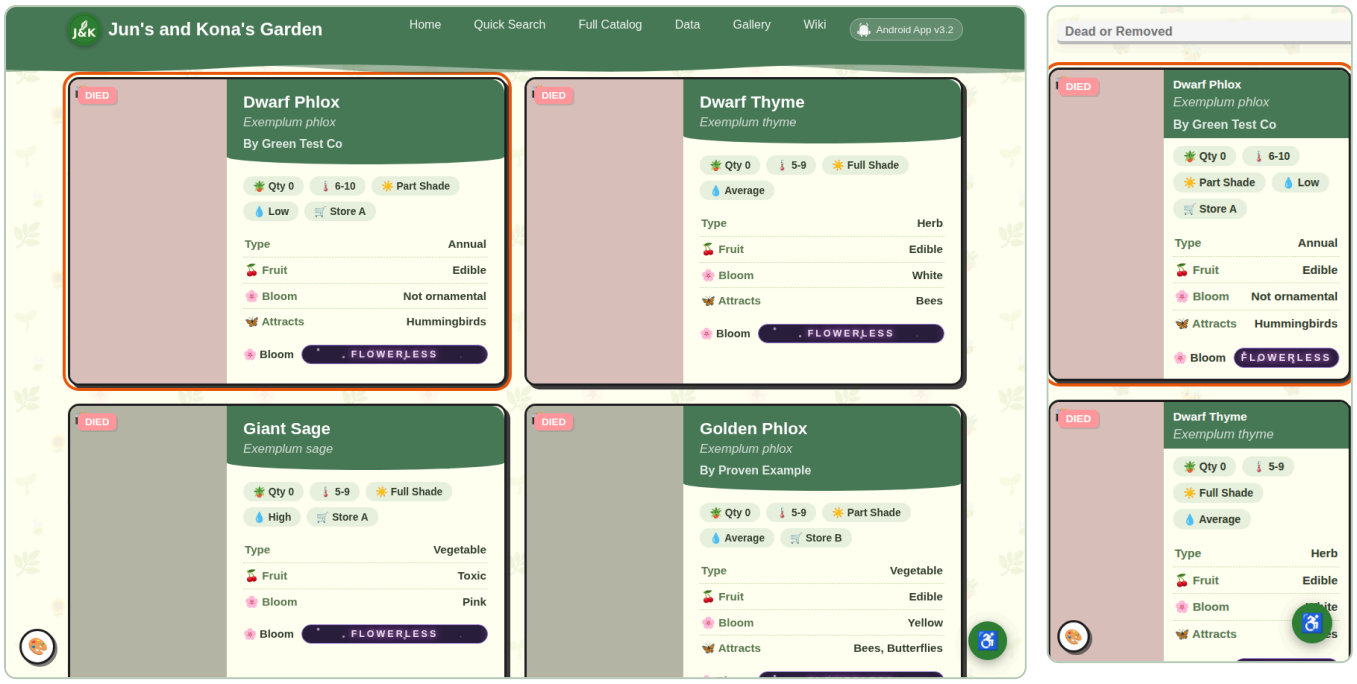

4.7 The order of the cards

- Without a search, cards are **grouped by bed** (a green bed name above each group), beds in alphabetical order, and inside each bed **by plant name**.
- A plant that grows in **several beds** has a card in each bed. While you search, it has one card.
- The **A–Z** buttons sort by plant name only.
- **Wish-list plants** that match a search come last, with a **Wish List** badge.

- More cards load by themselves as you scroll (nine at a time on a computer, three on a phone). At the very end the page says **End of Garden**.

4.8 A plant card, piece by piece

- **The photo** on the left (the main photo, section 4.11). No photo yet: a "coming soon" drawing.
- **DIED** (red, top left): the plant died or was removed; its photo is pale. **Wish List**: a plant you do not have yet. ✓ **Done**: you ticked it as done. 📸: its photo is approved.
- **The green header:** the common name, the botanical name (in italics) and **By** the company or brand.
- **The small chips:** 🪴 **Qty** (how many you have), 📈 growth rate, 🌡️ hardiness zones, ☀️ sun, 💧 water, 🛒 the store where it was bought.
- **The rows: Type** (perennial, annual, shrub, ...), 🍃 **Leaf**, 🍒 **Fruit**, 🌸 **Bloom** (colour), 📐 **Size**, 🌎 **Native**, 🦋 **Attracts**.
- 🌱 **Plant** and 🌸 **Bloom:** the months to plant it and to see flowers. An evergreen plant shows a 🌲 **Foliage** bar for the whole year; a plant without flowers shows **FLOWERLESS**.
- **A short description** at the bottom, when there is one.
- **A glowing border** means someone has starred the plant as a favourite.

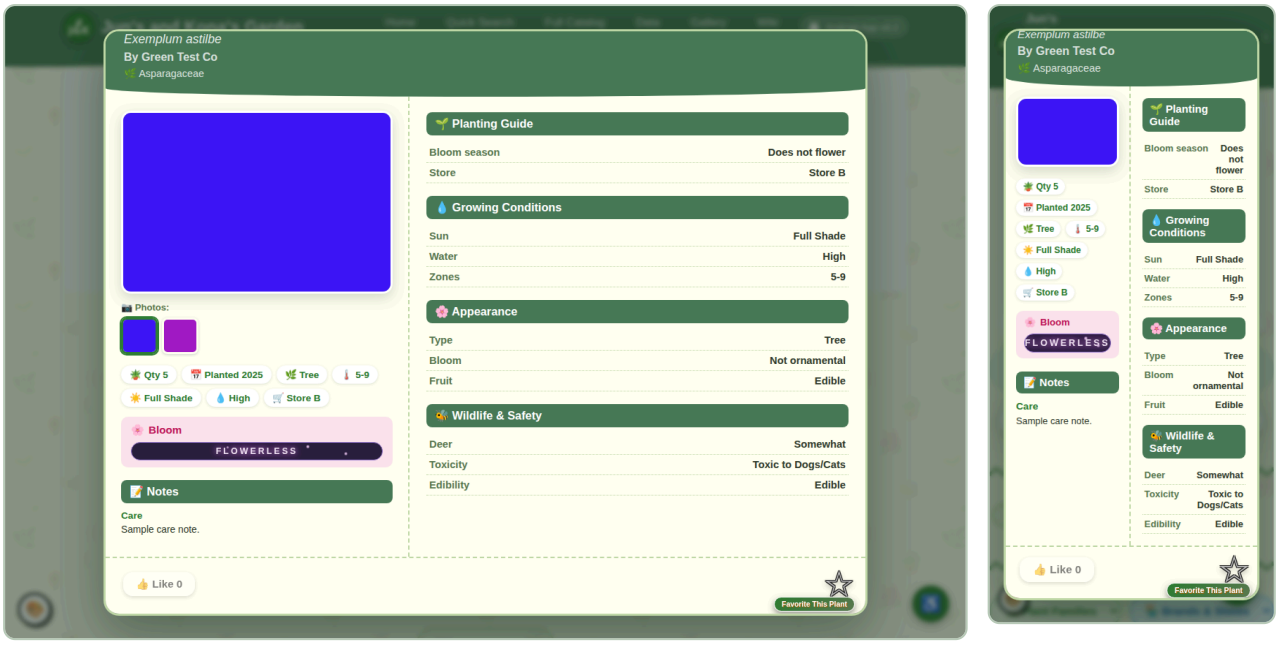

Tap a card to open the plant's window.

4.9 The plant window

1. The window repeats the card and adds everything else: the family › genus › species line, all the photos, the chips (also 📅 **Planted** and the plant type), the plant and bloom months,

and 📝 **Notes** (Care, Maintenance, Cleanup, Propagation, Companion plants, Pests & disease, More).

2. On the right, the facts in five groups: 🌱 **Planting Guide** (grow and bloom season, spacing, planting depth, mature size, chilling hours, life expectancy, average cost, store), 🪵 **Root System**, 💧 **Growing Conditions** (sun, water, soil type, soil pH, zones, native status), 🌸 **Appearance** (type, leaf, foliage colour, bloom, fruit) and 🐝 **Wildlife & Safety** (attracts, deer, toxicity, edibility). Facts that are empty are simply left out.

3. At the bottom: 👍 **Like** (with the count) and ☆ **Favorite This Plant**. Anyone can like and star; a visitor's marks belong to that visit only. Signed in, the plant's QR code is under the facts (**Scan to open this plant**).
4. Tap the big photo to see it large, with the comments (chapter 12). Close the window with ✕, the **Esc** key, or a tap outside it.

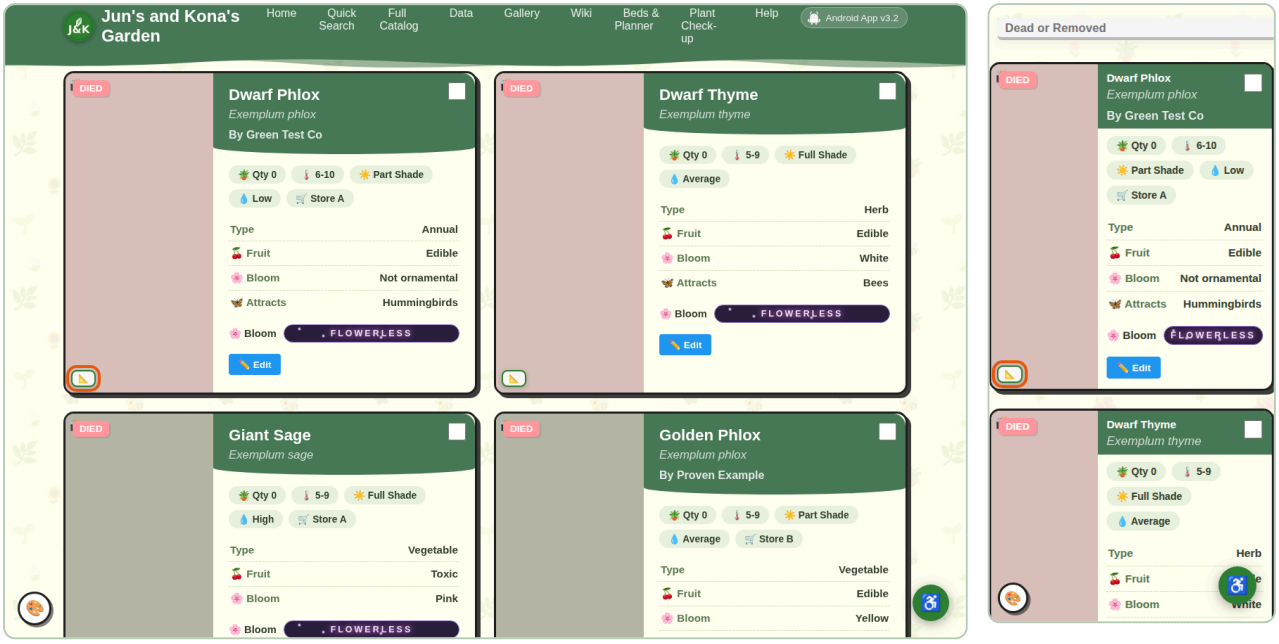

4.10 The owner's buttons (signed in)

Signed in, you see a few more buttons. Visitors never see them.

1. In the plant window, top right: ✅ **Jun Done** (tick it when you have checked this plant; the **Views** in 4.4 use it), 📸 **Image Approved** (tick it when the photo is right) and ✏️ **Edit** (opens the plant in the Add / Edit box, section 4.13).

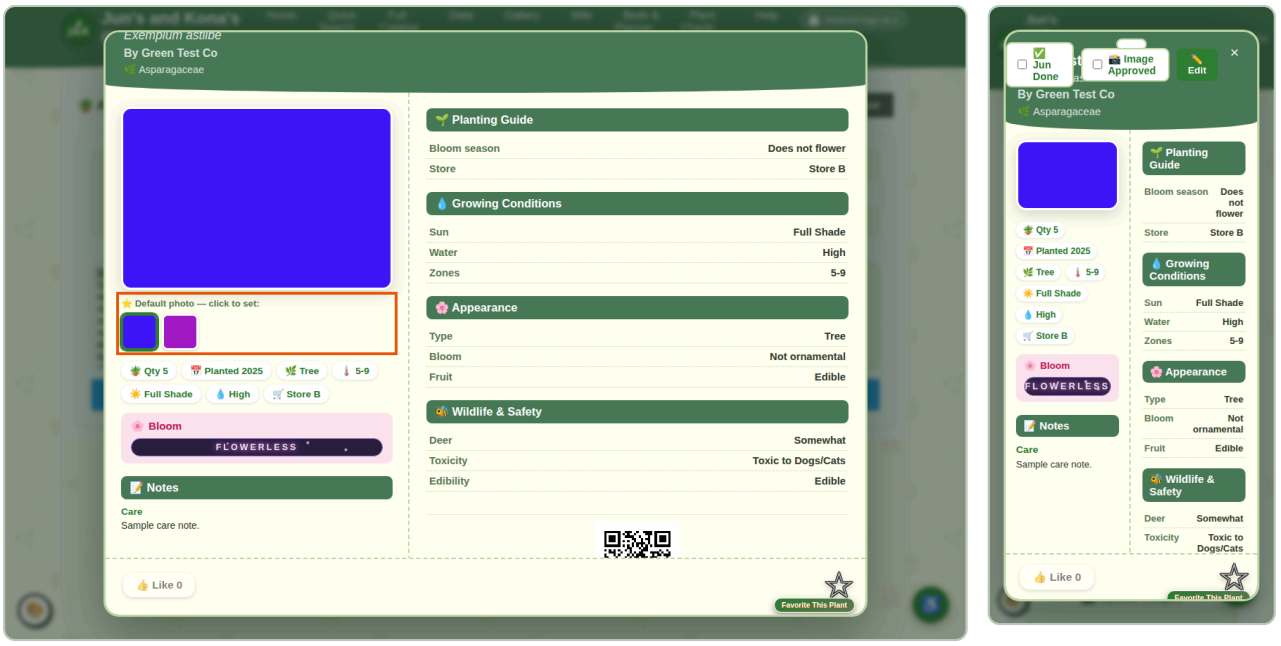

2. On each card: a small **checkbox** at the top right (to move several plants at once, section 4.12), ✏️ **Edit**, and 📐 on the photo (the focus point, next section). A wish-list card also has 🌱 **Add** to bring that plant into the garden.

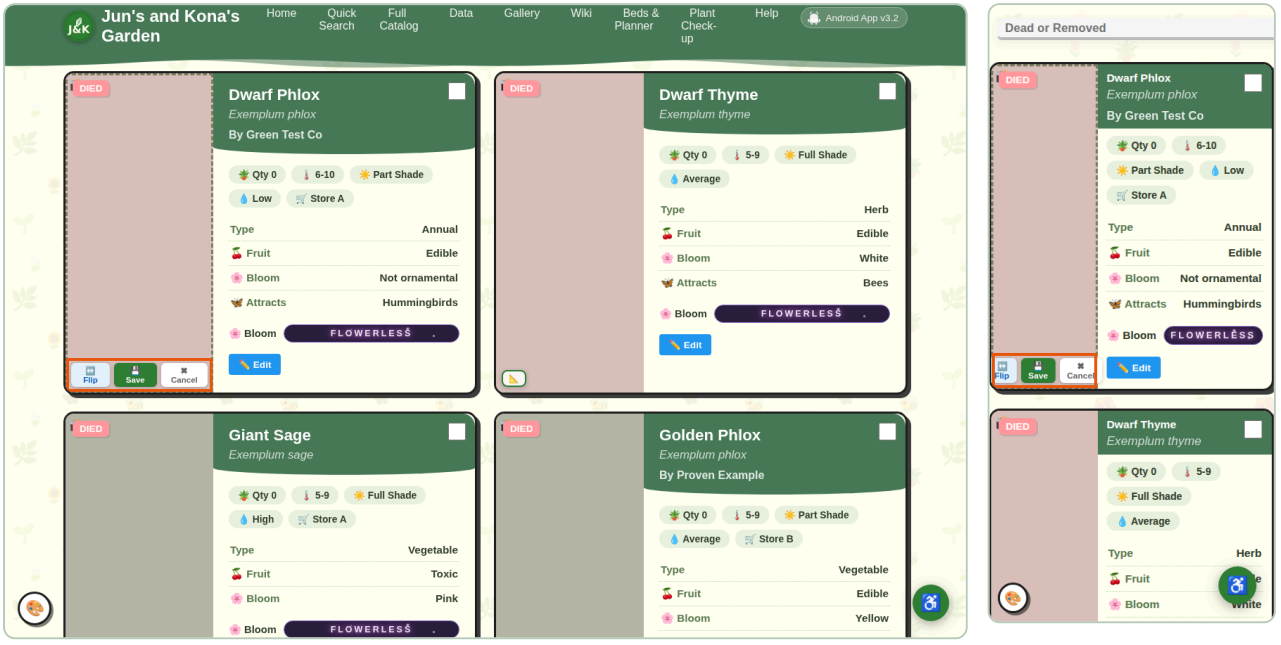

4.11 The main photo and its focus point (owner only)

A plant can have several photos. The **main photo** is the one on its card. The **focus point** is the part of the photo the card shows when the photo does not fit the card's shape.

1. **Choose the main photo:** open the plant's window. Under the big photo, ⭐ **Default photo — click to set:** shows every photo of the plant. Click one: it becomes the main photo at once (it gets a green frame) and the card changes too. Visitors see the same small photos as 📷 **Photos:** and can only look.

2. **Set the focus point:** on the card, hold the pointer over the photo and press 📐. The photo gets a dashed frame and three buttons. Drag the photo (with the mouse, or a finger on a phone) until the part you want is in view. ↔️ **Flip** turns the photo the other way round. 💾 **Save** keeps it, ✖ **Cancel** puts it back as it was.

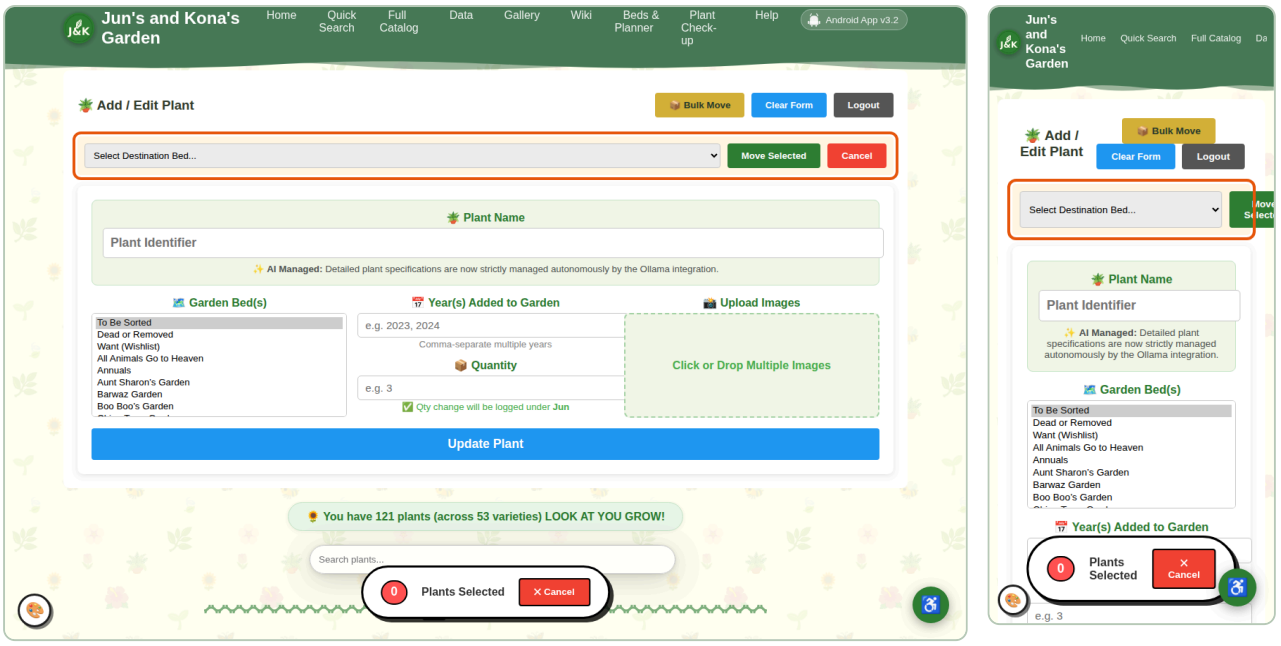

3. The plant window uses the same focus point and flip.

A tool that picks the best main photo and focus point by itself is being built: see chapter 19.

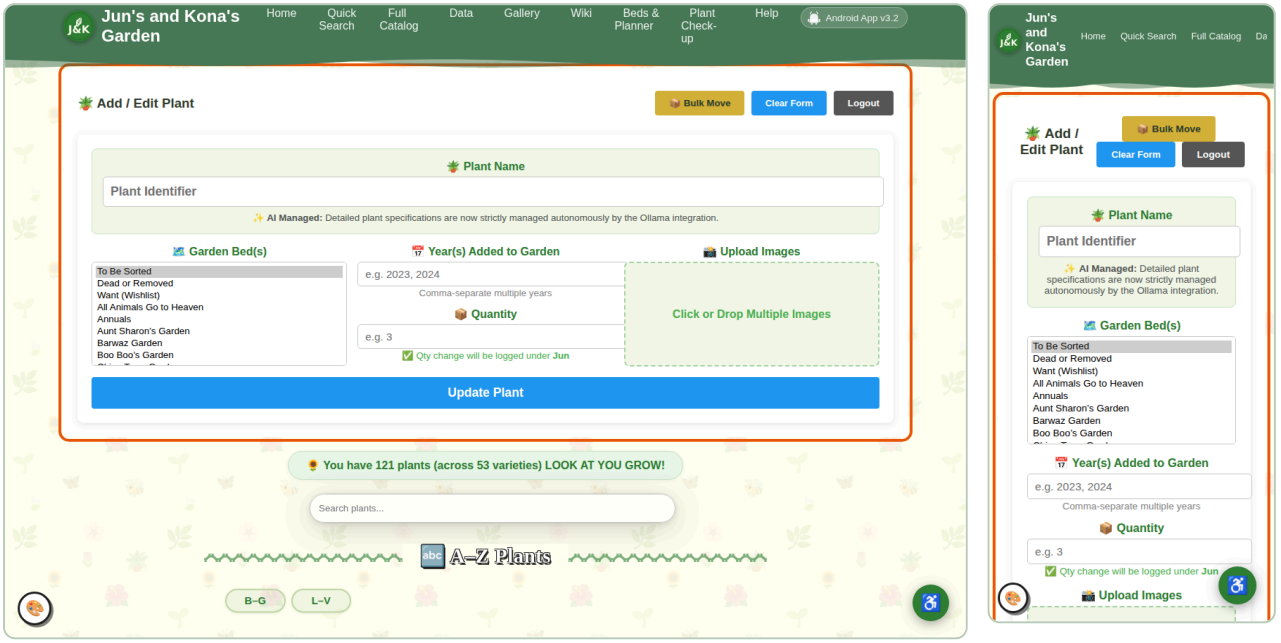

4.12 Moving many plants at once: Bulk Move

1. Signed in, press 📦 **Bulk Move** at the top. A bar appears with **Select Destination Bed...**.
2. Tick the checkbox on each card you want to move. A counter at the bottom shows **N Plants Selected**.
3. Choose the bed and press **Move Selected**. **Cancel** (or ✕ **Cancel** on the counter) stops without moving anything.

4.13 The Add / Edit box at the top (signed in)

1. The box at the top of the catalogue is the quick editor: 🪴 **Plant Name**, 🗺️ **Garden Bed(s)** (hold **Ctrl**, or **Cmd** on a Mac, to pick several), 📅 **Year(s) Added to Garden** (several years with commas: `2023, 2024`), 📦 **Quantity** and 📸 **Upload Images** (click, or drop several photos). ✏️ **Edit** on a card fills the box with that plant; **Update Plant** saves it. **Clear Form** empties it.

2. A changed quantity is written in the plant's history under your name. The green 📊 **Log a Quantity Event** box below the form records a purchase, a death or a removal (chapter 8).
3. All the other facts of a plant are changed on the admin page (chapter 7).

Only the accounts allowed to upload photos see the photo box; others see a short notice instead.

4.14 The Source link

This part comes with the "Source link" update, which is being reviewed now. Until it is in your garden, the link does not show.

1. A plant can have a **Source**: the web page where its grower or shop sells it. When it has one, a link named **Source** (always in English, also on Korean pages) appears under **By** the company, on the card and in the plant window. It opens the grower's page in a new tab.
2. You add it in the admin page's ✍ **Manual Editor**, in the box **Source** next to **Company / Brand**, and press **Save Changes**. Wish-list plants have the same box.
3. Only a full web address that starts with `https://` is kept, for example `https://www.example.com/plant`: no spaces, at most 500 letters. Anything else is refused with a message and nothing is saved, so copy the address from the browser's address bar.

4.15 What the facts mean

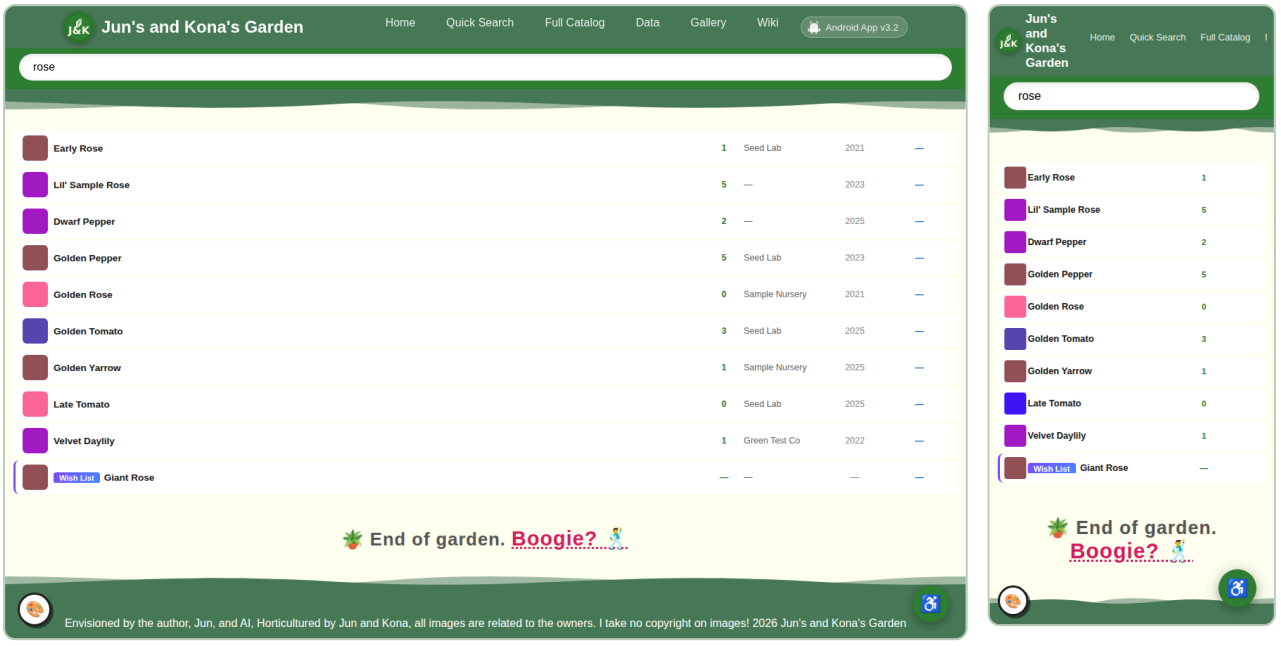

Fact	What it means
Qty	How many of this plant you have now. Changes are logged with your name.
Planted / Year(s) added	The year or years it went into the garden.
Type	Perennial, annual, biennial, shrub, tree, vine, herb, vegetable, succulent ...
Growth rate	How fast it grows (slow, medium, fast).
Zones	The USDA hardiness zones where it survives the winter, for example 4-9.
Sun	Full sun, part shade, full shade, or a range.
Water	How much water it needs (low, average, high).
Store / By (company)	Where it was bought / who grew or sells it.
Native status	Native to your area, or a cultivar (bred by people).
Leaf, Foliage color	Leaf type, shape and edge; the colour of the leaves.
Bloom	Flower colour and shape. "Not ornamental": small flowers you would not grow it for.
Fruit / Edibility	Fruit type and colour; who can eat it (edible, wildlife only, toxic).
Size, Spacing, Planting depth	Mature height × width; how far apart to plant; how deep.
Chilling hours	Hours of winter cold some fruit plants need before they flower.
Life expectancy	How many years it usually lives.
Avg. cost	The average price paid.
Root system	The kind of roots, their shape and what they do.
Soil type, Soil pH	The soil it likes; how acid or alkaline.
Attracts	The wildlife it brings: bees, butterflies, hummingbirds, birds.

Fact	What it means
Deer	How well it resists deer (and rabbits).
Toxicity	Who it is poisonous to: humans, dogs, cats, or non-toxic.
Plant / Bloom months	When to plant it, and when it flowers. Evergreen: leaves all year. FLOWERLESS: no flowers.
Notes	Care, maintenance, cleanup, propagation, companions, pests and disease, more.

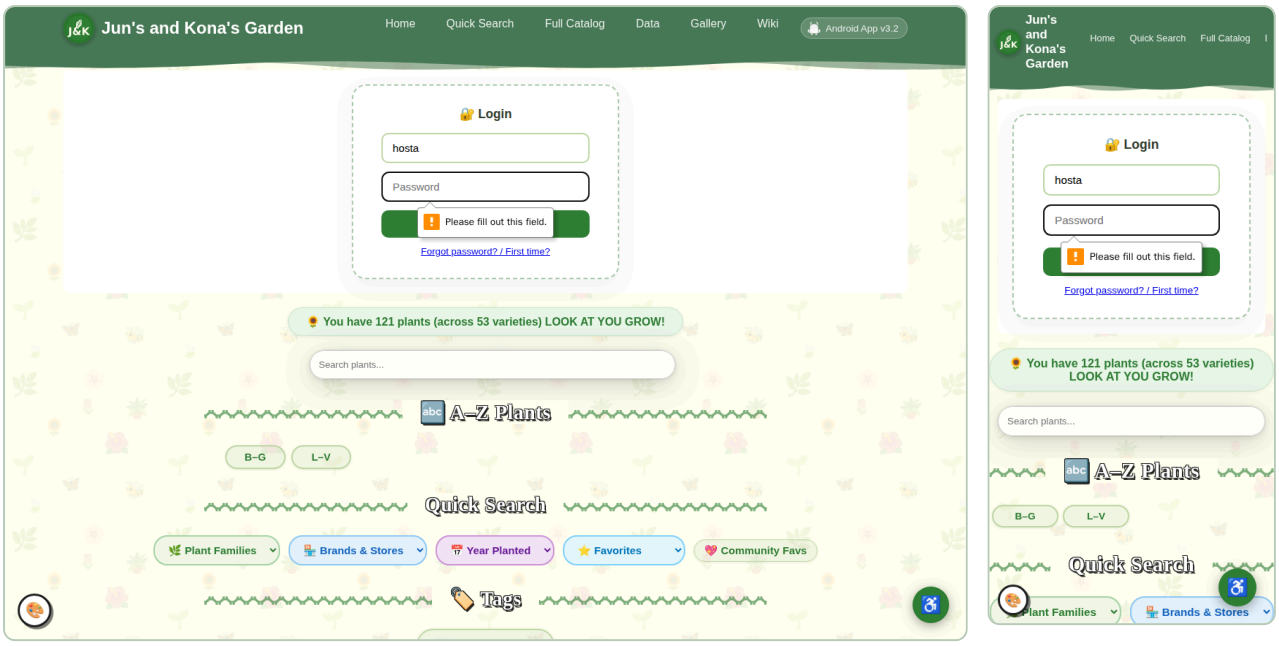

5. Search, on every page

5.1 Quick Search and the Full Catalog

1. **Quick Search**: type part of a name; matching plants appear as you type.

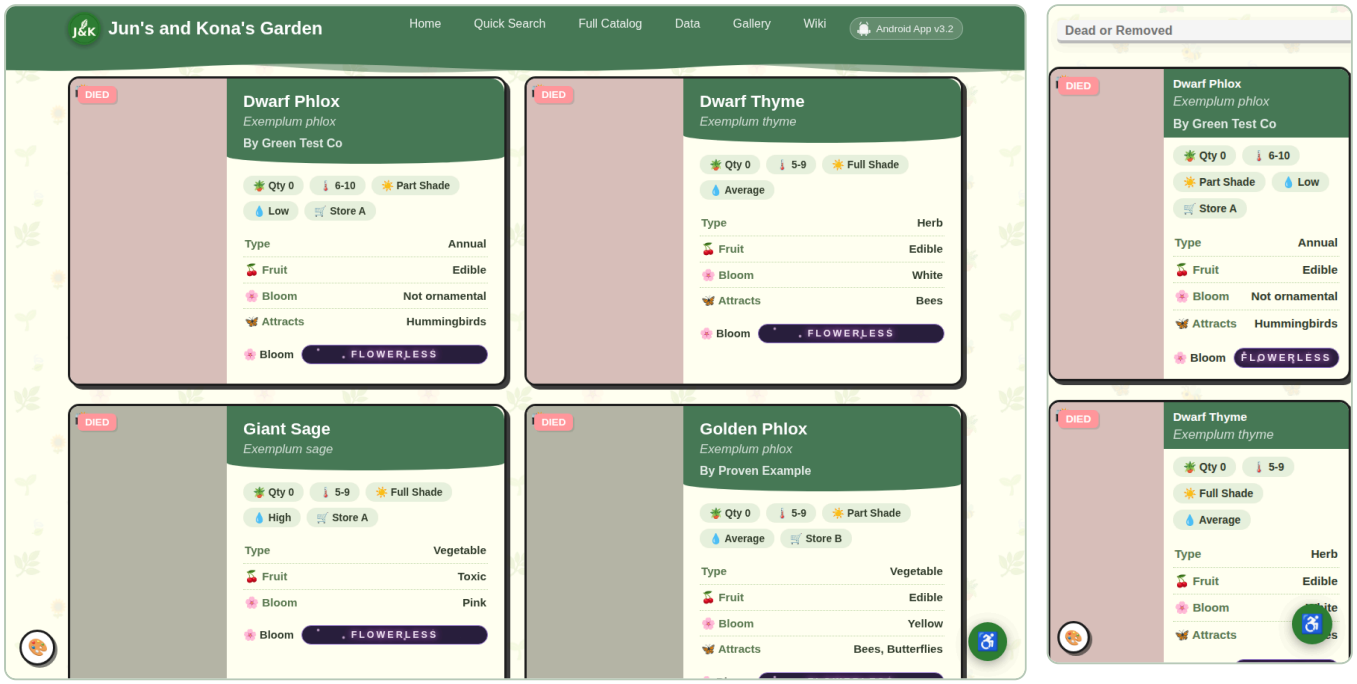

2. **Full Catalog**: the search box at the top filters the cards; the letters and the bed buttons narrow it down too.

5.2 What the Full Catalog's search looks in

The search box looks for what you typed **anywhere** in these facts of every plant: the common name, the botanical name, family, species, bed, company, store, sun, water, zones, deer resistance, toxicity, soil type and pH, bloom and foliage colour, size and spacing, the seasons and months, the year planted, fertilizer, cuttings, propagation, disease, and the care, maintenance and cleanup notes. Wish-list plants are found by their name, botanical name and company.

For example, **Bees** finds the plants that attract bees:

Tips

- Capitals do not matter: `rose`, `Rose` and `ROSE` find the same plants.

- Part of a word works: `hyd` finds hydrangeas. The letters you type are looked for together, so `red rose` only finds a fact where exactly those words stand side by side.
- Punctuation in names is ignored: `Lil Kim` finds **Lil' Kim**.
- **Attracts** needs the whole word as it is written: `Bees` or `Hummingbirds`, not `Bee`.
- A year finds the plants planted that year: `2024`.
- A bed, a store or a brand works too: `Front Border`, `Home Depot`, `Proven Winners`.
- **Korean names:** plant names are kept in English (and Latin), so search with the English or the botanical name. A Korean word only finds a plant when that word is written in one of its notes.
- Nothing found? Try fewer letters, or the botanical name.

Special searches (the buttons type these for you; you can type them too):

Type this	It shows
`^A` or `^B-C-D`	plants whose name starts with those letters (the A–Z buttons)
`edible:full`, `edible:semi`, `edible:wildlife`, `edible:toxic`	the four Edibility buttons
`view:image_approved`, `view:image_not_approved`, `view:jun_done`, `view:not_done`	the Views buttons (signed in)
`⭐ Jun's Favs`, `💖 Community Favs`	the favourites lists

5.3 The Quick Search page

Quick Search (top bar) is a short list instead of cards: a small photo, the name, **Qty**, company, year planted, average cost, and 📋 when the plant has a to-do note (hold the pointer on it to read it). Type in its box: the list changes as you type (no **Enter** needed). It uses the same search as the Full Catalog, so the tips above work here too. Wish-list plants have a purple **Wish List** mark.

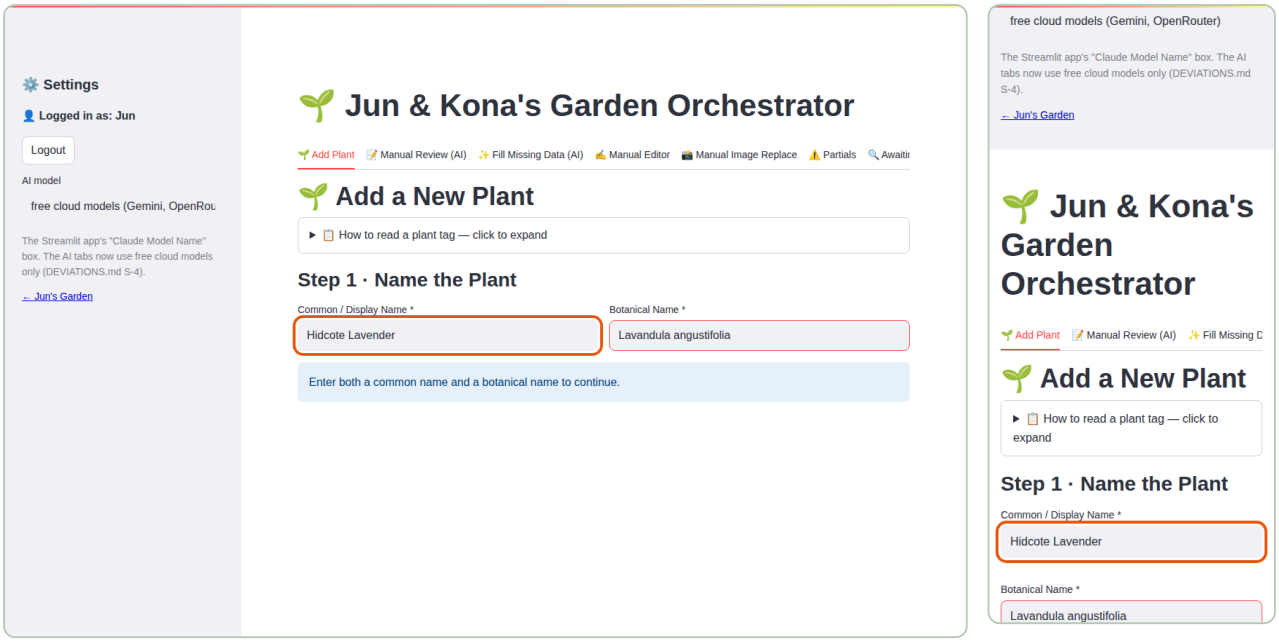

5.4 Search in other places

Where	What it searches	Tips
Gallery (chapter 13)	the photos' tags	Pick several tags: only photos with **all** of them stay. **Backspace** in an empty box removes the last tag; ✕ clears all.
Help (chapter 15)	guide titles, summaries and #tags	Every word you type must appear. On the **한국어** list, search in Korean.
Admin page: Manual Image Replace, Bed Assignment	name, botanical name, family	Part of a word; capitals do not matter.
Admin page: Wishlist	the wish-list plant names	The same.
Admin page: Field Reference	the field names	For example `bloom`, `root`, `string`.

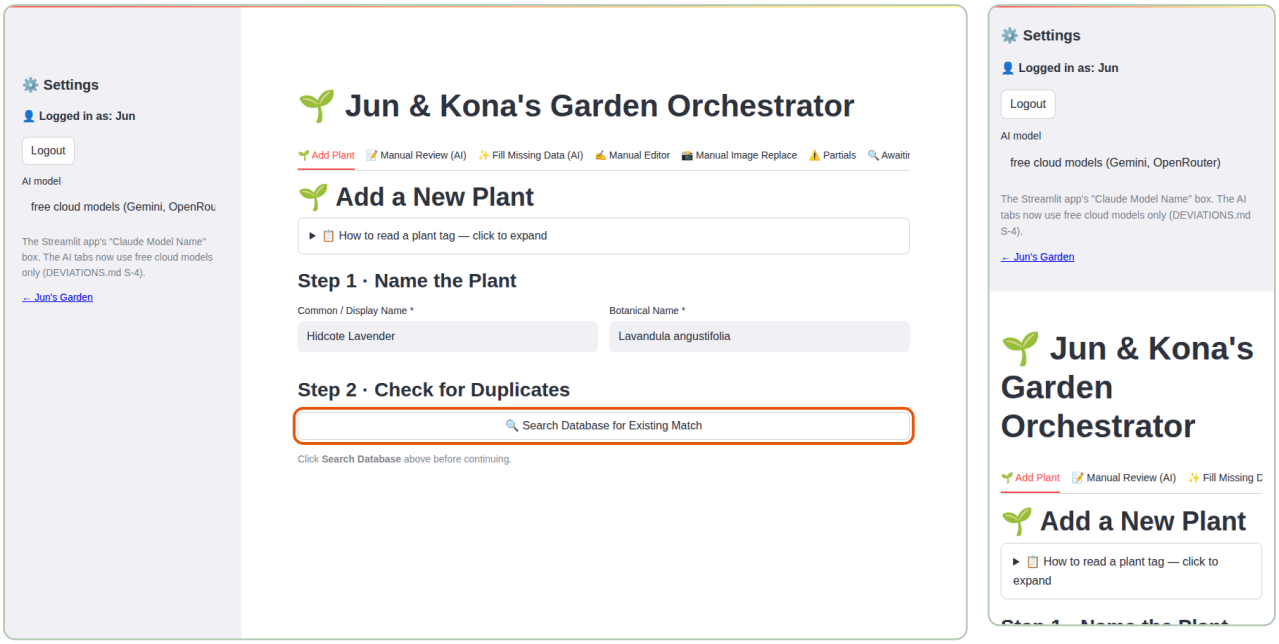

Where	What it searches	Tips
Data page (chapter 14)	no typing: pick from the lists	The small boxes under each dimension narrow the table.
Phone app (chapter 16)	name, botanical name, family, bed, company, genus	One letter alone = the names that start with it. The bed chips narrow it further.

6. Adding a plant

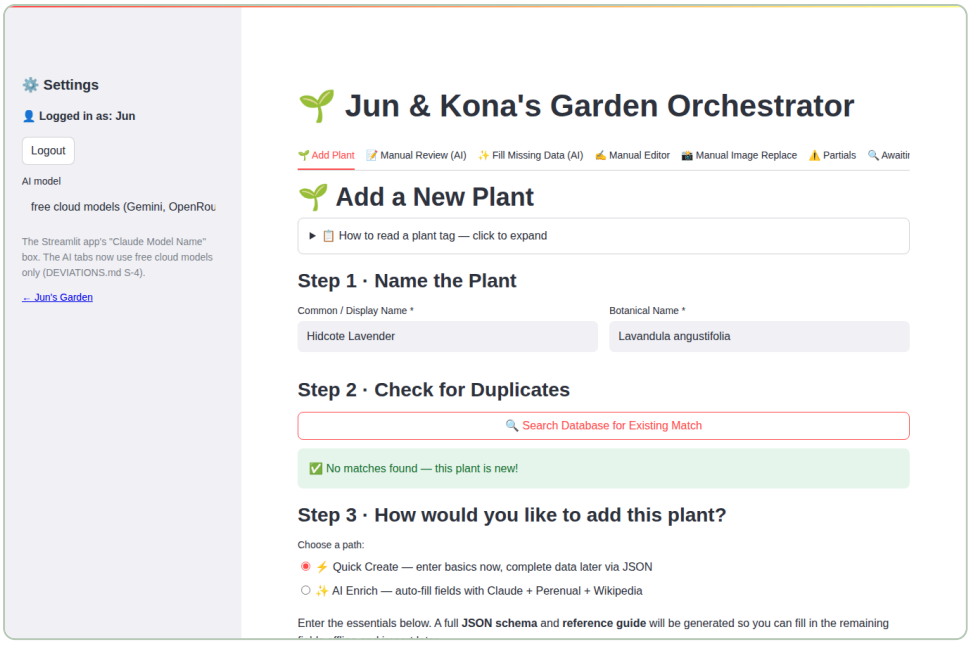

1. Open the tab 🌱 **Add Plant**. Type the plant's common name and its botanical name.

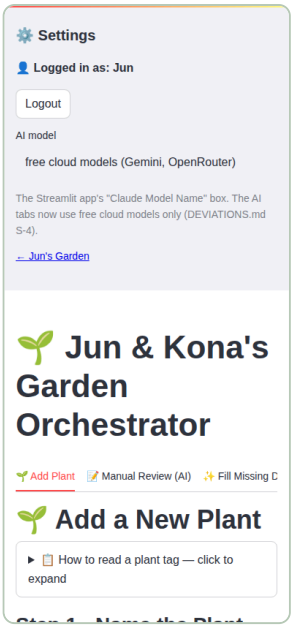

2. Press **Enter**. The next step appears, with the button 📋 **Create Record →**.

3. Press 📋 **Create Record →**. The page checks that the plant is not in the garden already (**Step 2**), then asks how to add it (**Step 3**): ⚡ **Quick Create** (the basics now, the rest later) or ✨ **AI Enrich** (the free AI fills in the details). Follow the steps down the page; the last button saves the plant, and it appears in the catalogue.

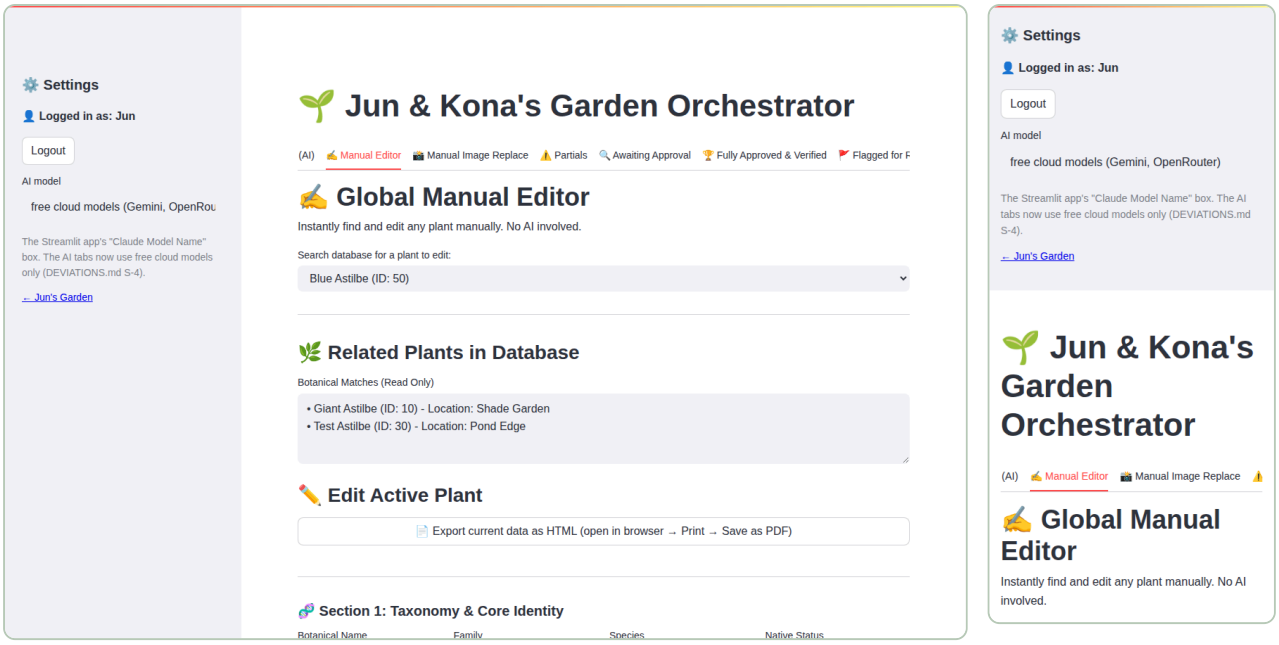

More about the steps

- 📋 **How to read a plant tag** (at the top, click to open it) explains which line of a nursery tag goes in which box.
- **Step 2 · Check for Duplicates** lists plants with a similar name. If the plant is already on your **wish list**, you can move that one into the garden (🌱 **Confirm: Move ... to garden database**) instead of making a new record. If a match is a different plant, tick **I've reviewed the matches** and carry on.
- ⚡ **Quick Create** saves the name, botanical name and beds now; the rest can be filled in later (by hand in chapter 7, or with the JSON Pipeline in chapter 10).
- ✨ **AI Enrich** asks the free AI to research the plant (this can take 20 to 40 seconds). You see every proposed value before anything is saved.
- **Start Over** clears the steps.

*A new way to add a plant with the garden's own AI, ending with an **Approve** button, is being built: see chapter 19.*

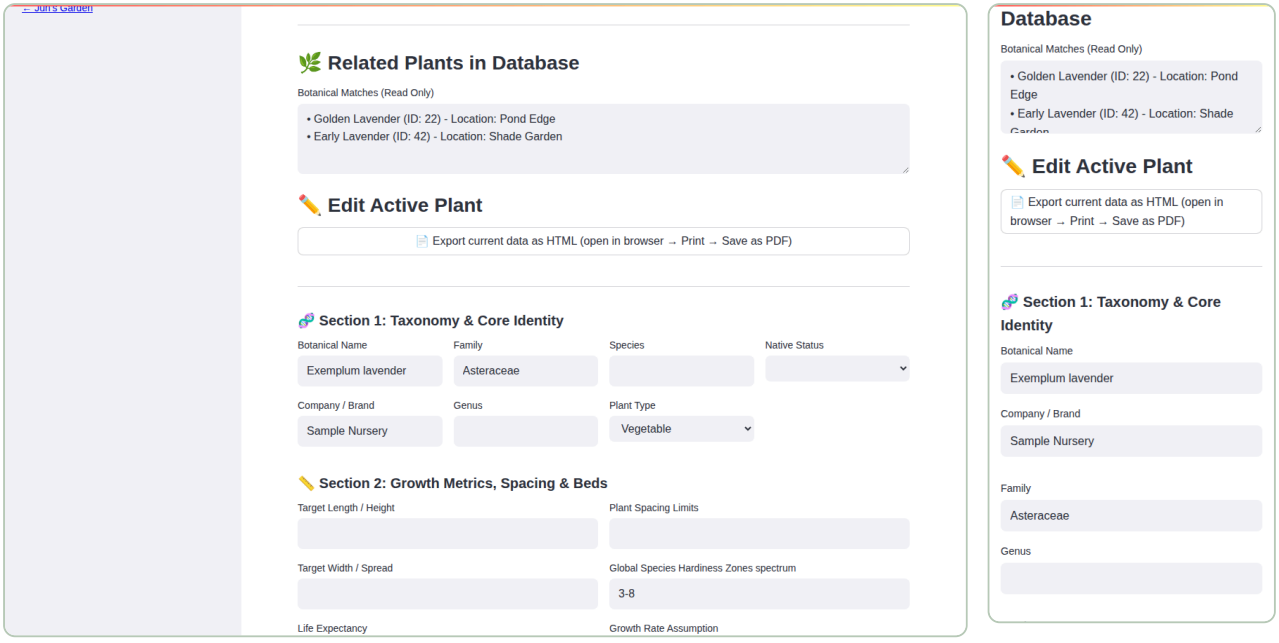

7. Editing a plant

1. Open the tab ✍️ **Manual Editor** and choose the plant from the list at the top.
2. Change what you want (for example the company, the bed, the sun it likes) and press **Save** at the bottom.

What the editor holds

1. Above the form, 🌿 **Related Plants in Database** lists your other plants with the same botanical name, and where they grow. 📄 **Export current data as HTML** makes a page of the plant that you can print or save as a PDF.

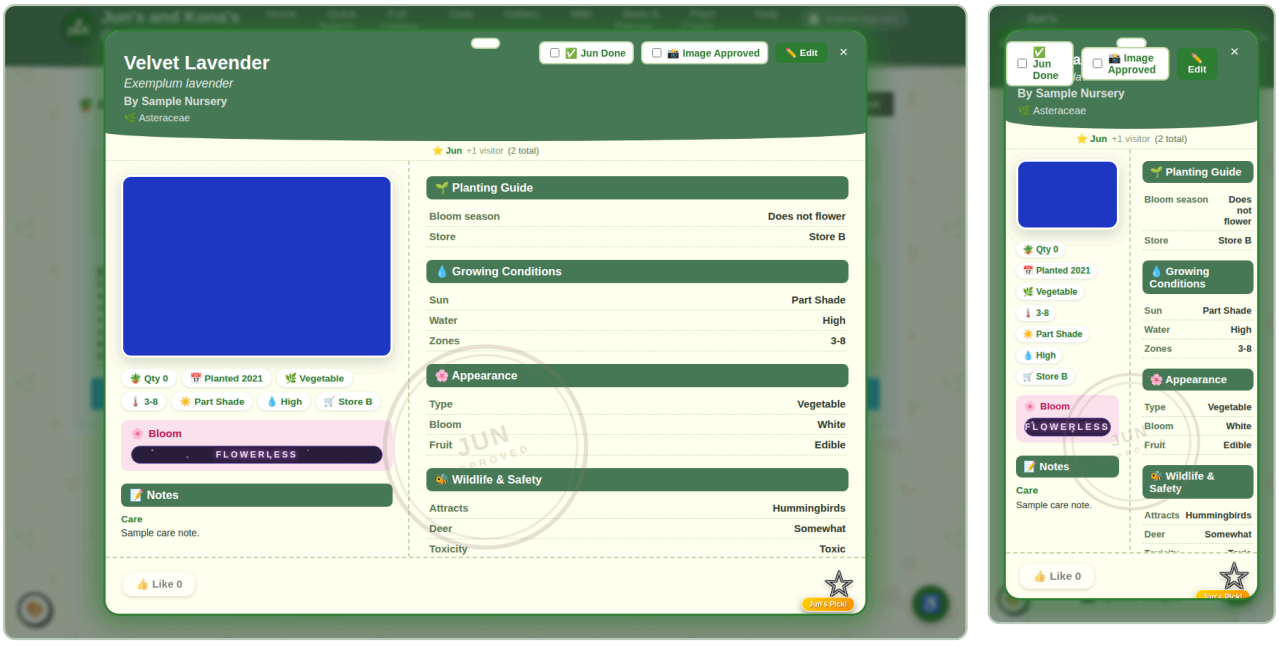

2. The form has fourteen sections: 1 Taxonomy & Core Identity (names, family, genus, species, company, type, native status), 2 Growth Metrics, Spacing & Beds, 3 Microclimatic Profiles & Soil Requirements (sun, water, soil, zones), 4 Investment & Procurement (cost, quantity, years), 5 Bed Location Manager (the beds), 6 Foliage & Stem, 7 Flower, Scent & Reproduction, 8 Fruit & Berry, 9 Root Systems, 10 Care, Hazards, Propagation & Companions, 11 Growth Calendars (the grow and bloom months; tick 🚫 **Does not bloom** for a plant without flowers), 12 Long-Form Journals (the notes, and ⚠️ **Flag Entry for Further Technical Review**), 13 Photos, 14 Validation Signing Authority (the author's and Jun's sign-off, chapter 10).
3. **Save Changes** at the bottom saves every section at once.

4. Under it, 📊 **Log a Quantity Event (optional)** records a purchase, a death or a removal (chapter 8).

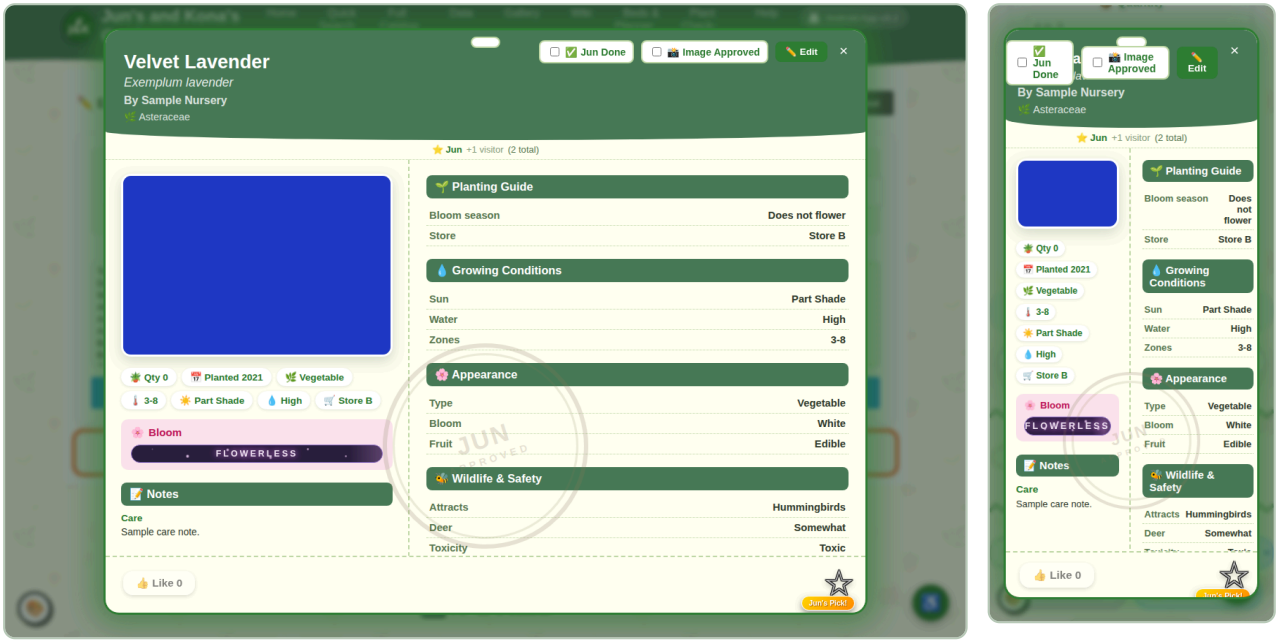

8. Removing a plant (it died, or you gave it away)

The garden keeps the plant's record and its history; you record that it is gone.

1. In **Full Catalog**, tap the plant to open its window.

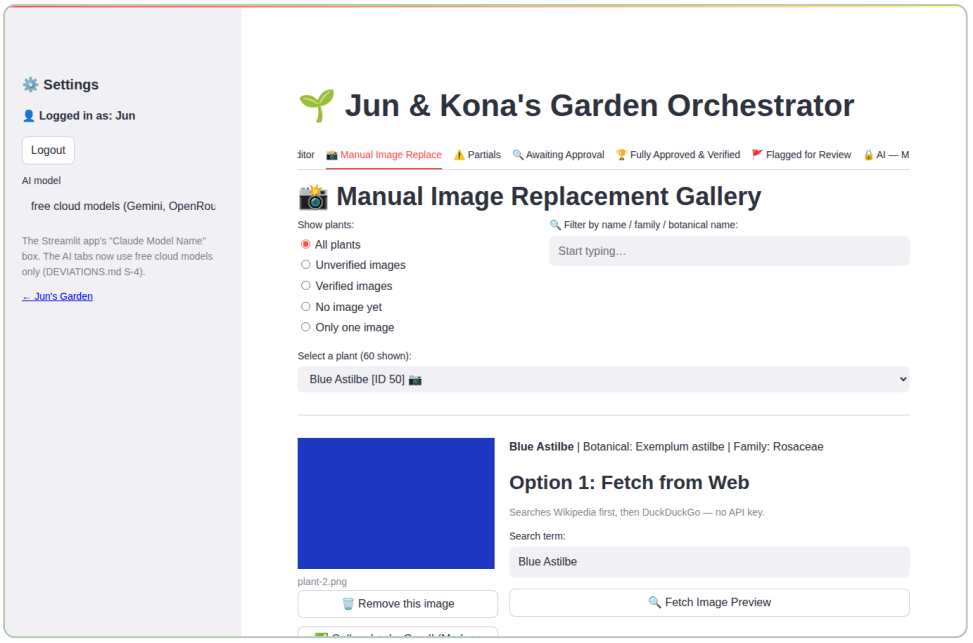

2. Press ✏️ **Edit**. In the green box below the form, choose the event 🗑️ **Removed** (or 💀 **Died**), how many, and save it.

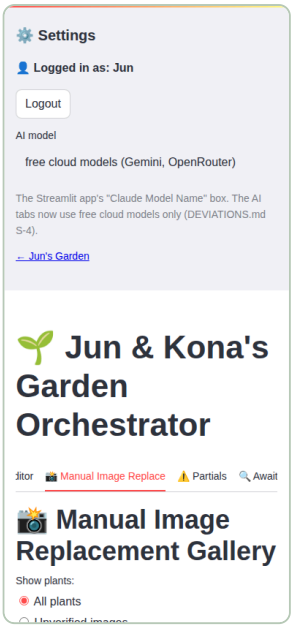

*The same box records a purchase (🛒 **Purchased / Added**) or anything else (📝 **Other**), with the week it happened and a note. The quantity changes by itself.*

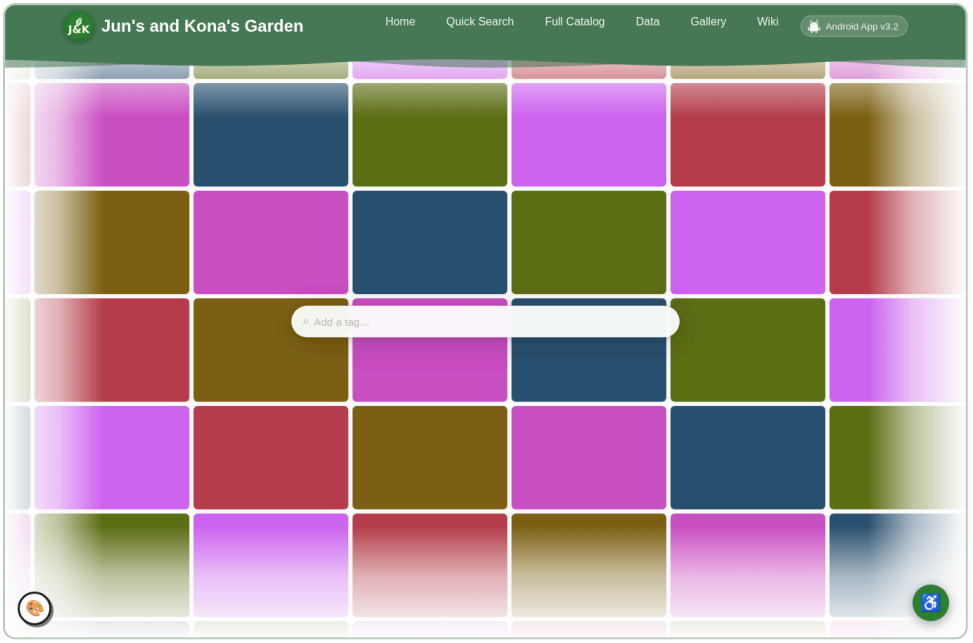

9. Photos

1. To give a plant a photo, or replace one: the admin tab 📸 **Manual Image Replace**. Choose the plant, pick the photo from your computer or phone, and save. 🗑️ **Remove this image** takes a photo away.

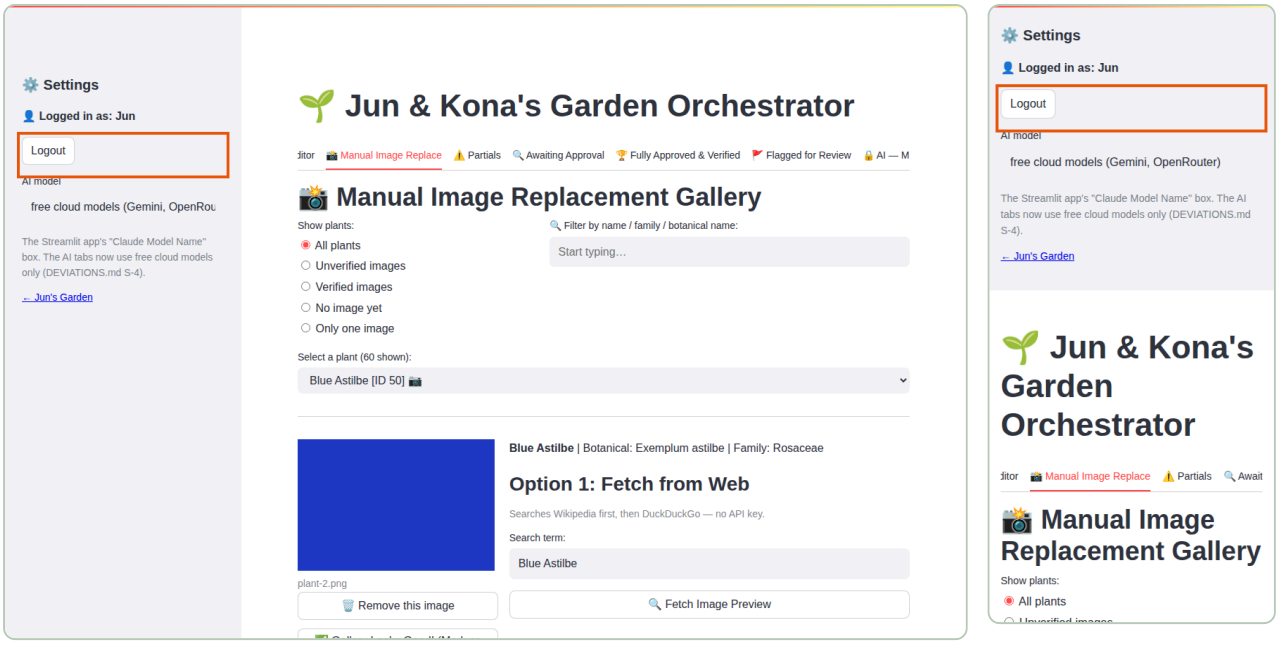

2. The **Gallery** page shows the garden's photos for everyone.

More about Manual Image Replace

1. **Show plants:** narrows the list: **All plants**, **Unverified images**, **Verified images**, **No image yet**, **Only one image**. 🔍 **Filter by name / family / botanical name** narrows it further. In the list, 📷 means the plant has a photo and ❌ that it has none.

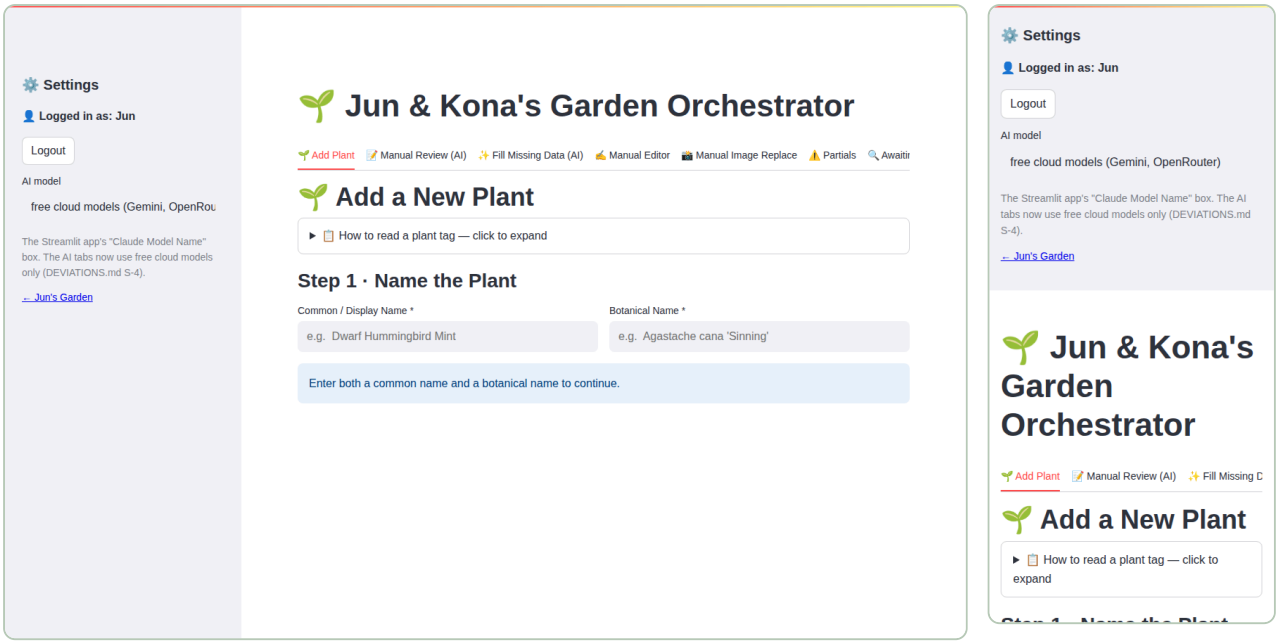

2. **Option 1: Fetch from Web** finds a photo on the web for you; ✅ **Confirm & Save** keeps it, ❌ **Discard** throws it away. **Option 2: Upload Your Own** takes a photo from your computer or phone; ✅ **Process & Save** keeps it (it is made web-sized for you).
3. Which photo is the main one, and which part of it shows on the card: section 4.11.

10. The admin page, tab by tab

All the plant tools are on one page, in tabs: **Admin** (the address ends in `/streamlit/`). Sign in first.

1. The tabs along the top each do one job: add a plant, edit one, photos, beds, the wish list, barcodes.

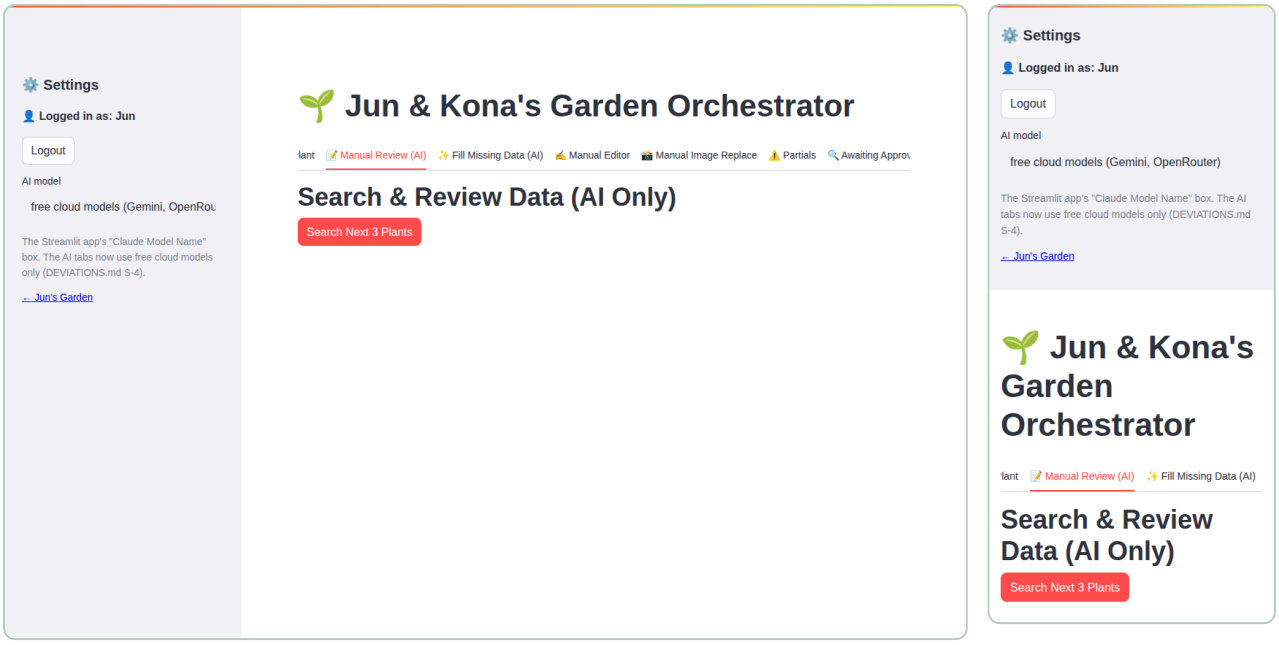

The left column: who is signed in, **Logout**, the AI in use (free cloud AI) and **← Jun's Garden** back to the website. On a phone the tabs slide sideways.

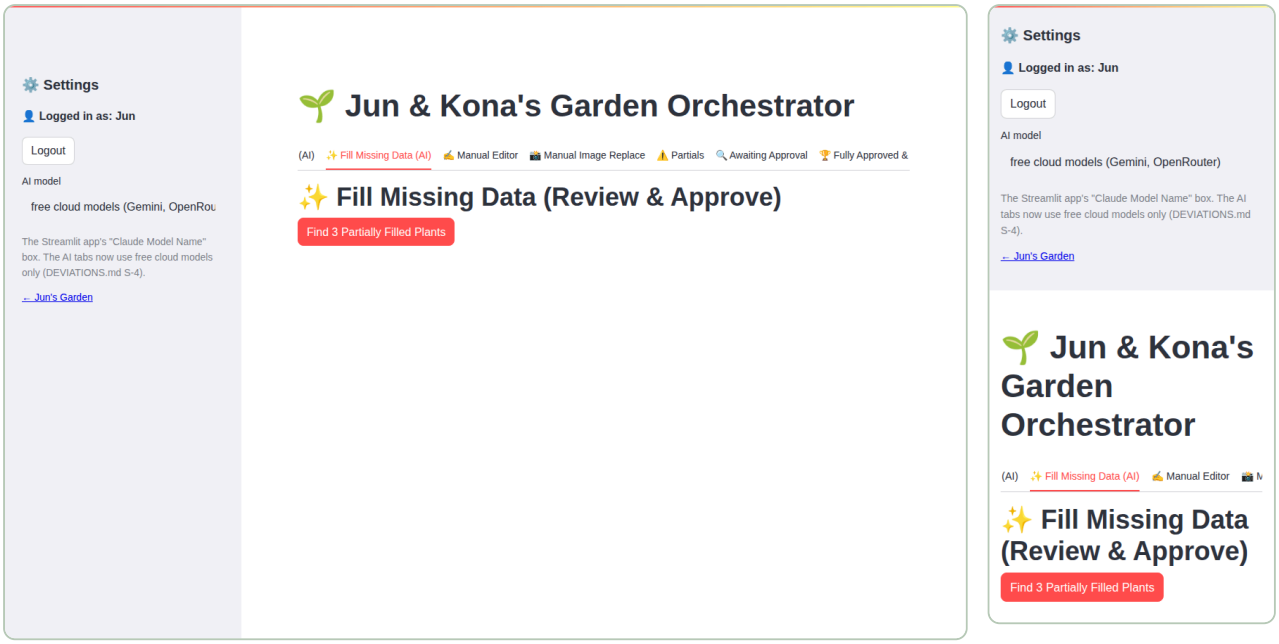

10.1 The AI tabs: Manual Review, Fill Missing Data, AI — Missing Only

The AI tabs use the free cloud AI that is set up on the garden computer (menu K). Without a key they say so. **Nothing the AI suggests is saved until you approve it.**

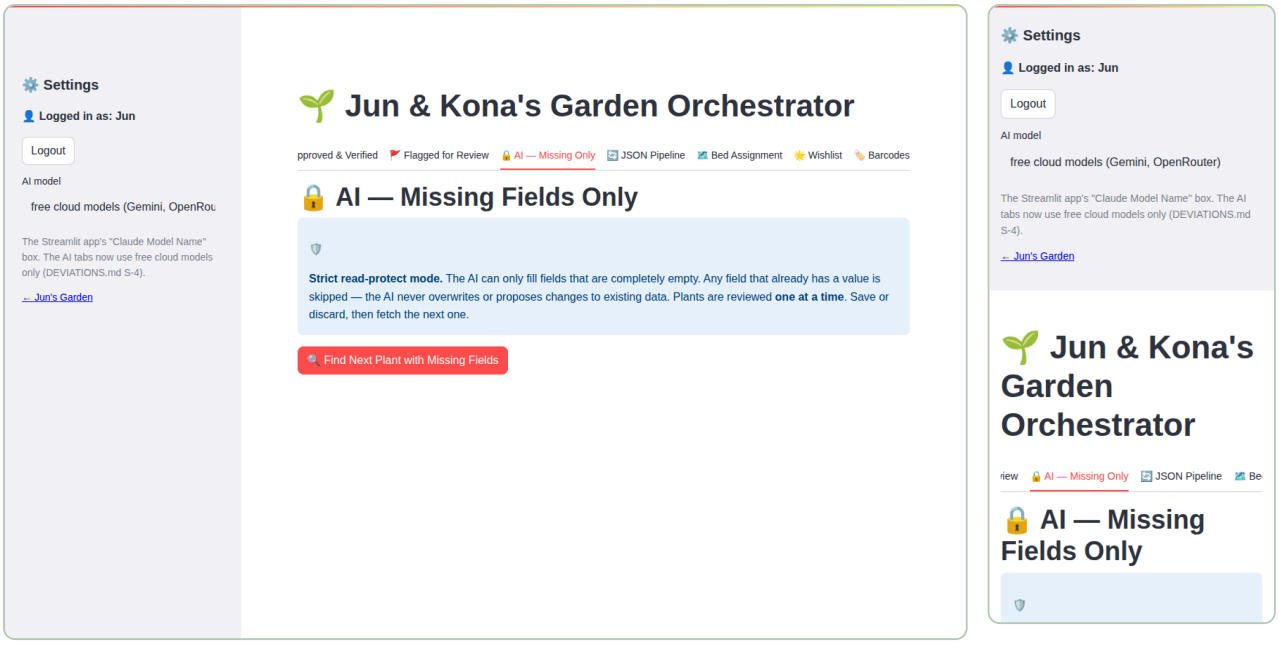

1. 📝 **Manual Review (AI): Search Next 3 Plants** takes three plants, asks the AI for their facts and shows its answers next to what you have. Keep what is right, then save.

2. ✨ **Fill Missing Data (AI): Find 3 Partially Filled Plants** finds plants with empty facts and lets the AI suggest them, for you to review and approve.

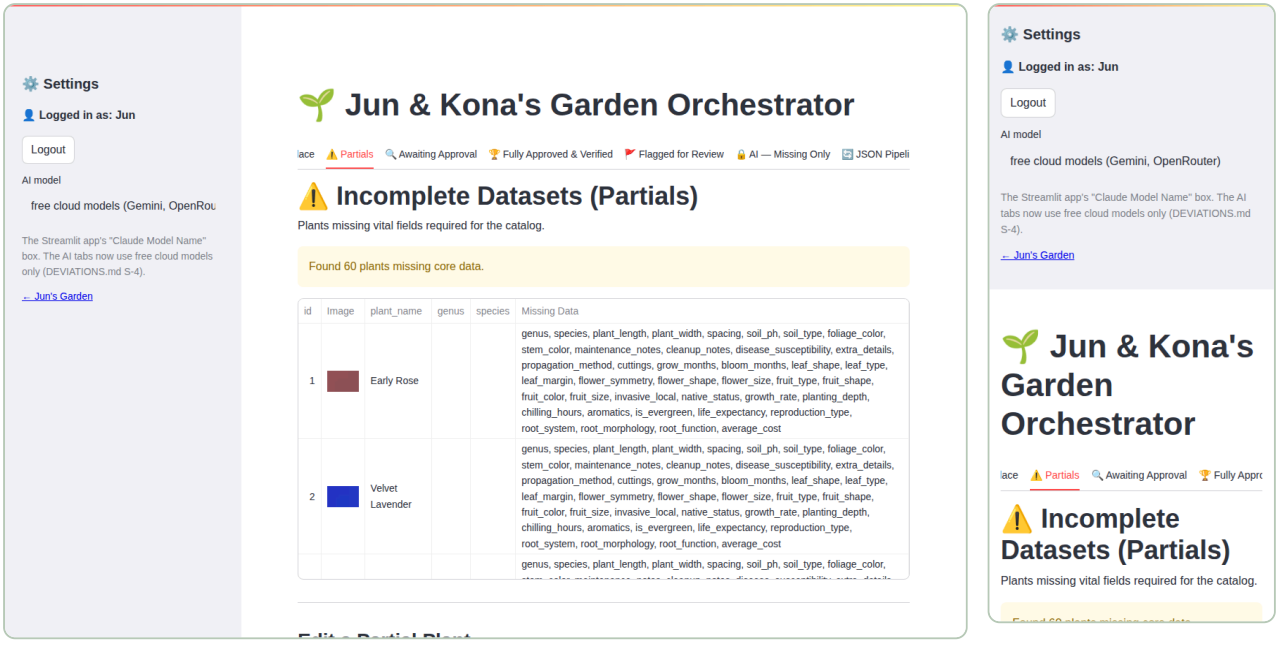

3. 🔒 **AI — Missing Only:** the careful one. The AI may only fill facts that are completely empty; it never changes a fact that already has a value. One plant at a time: 🔍 **Find Next Plant with Missing Fields**, then save or discard.

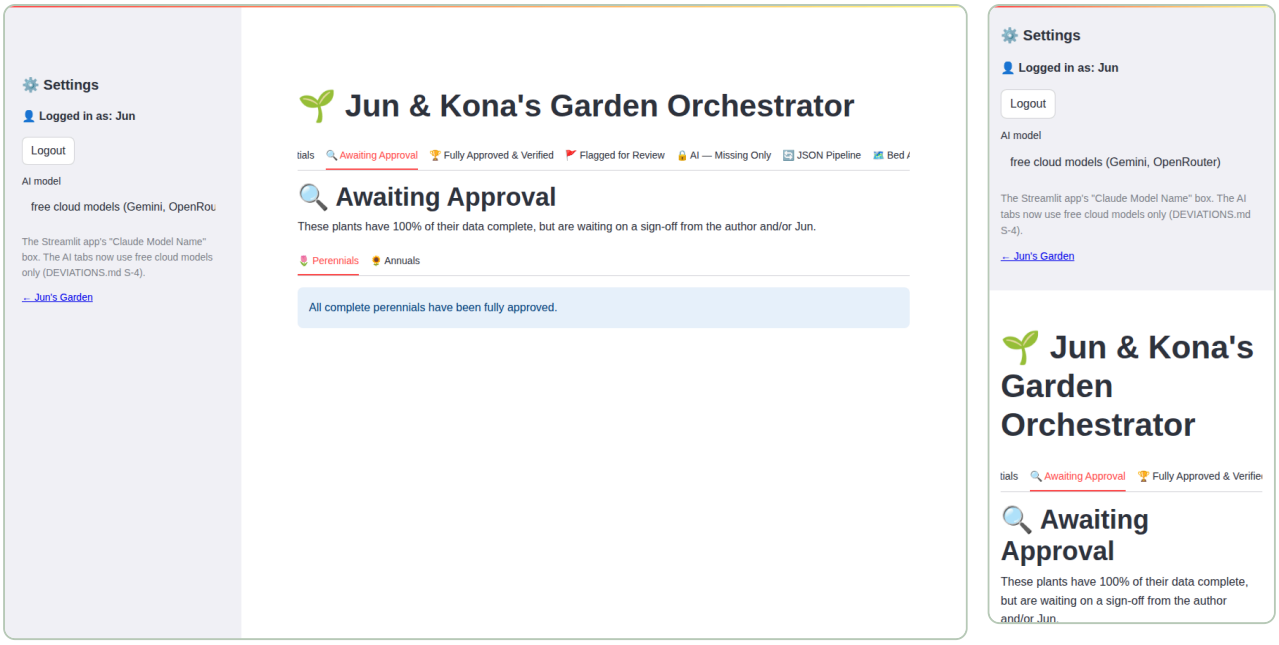

10.2 Checking the data: Partials, Awaiting Approval, Fully Approved, Flagged

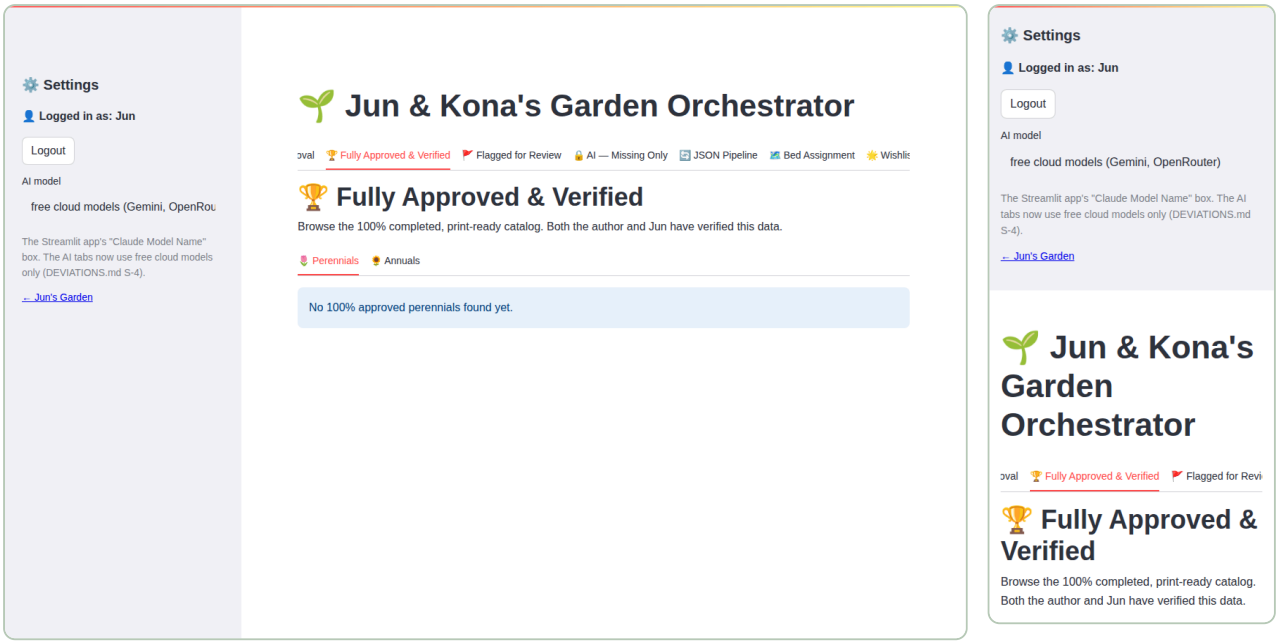

1. ⚠️ **Partials:** every plant that is still missing important facts, with the missing ones listed. Pick one below the table to fill it in (**Edit a Partial Plant**), or 📥 **Go to JSON Import →** to fill many at once.

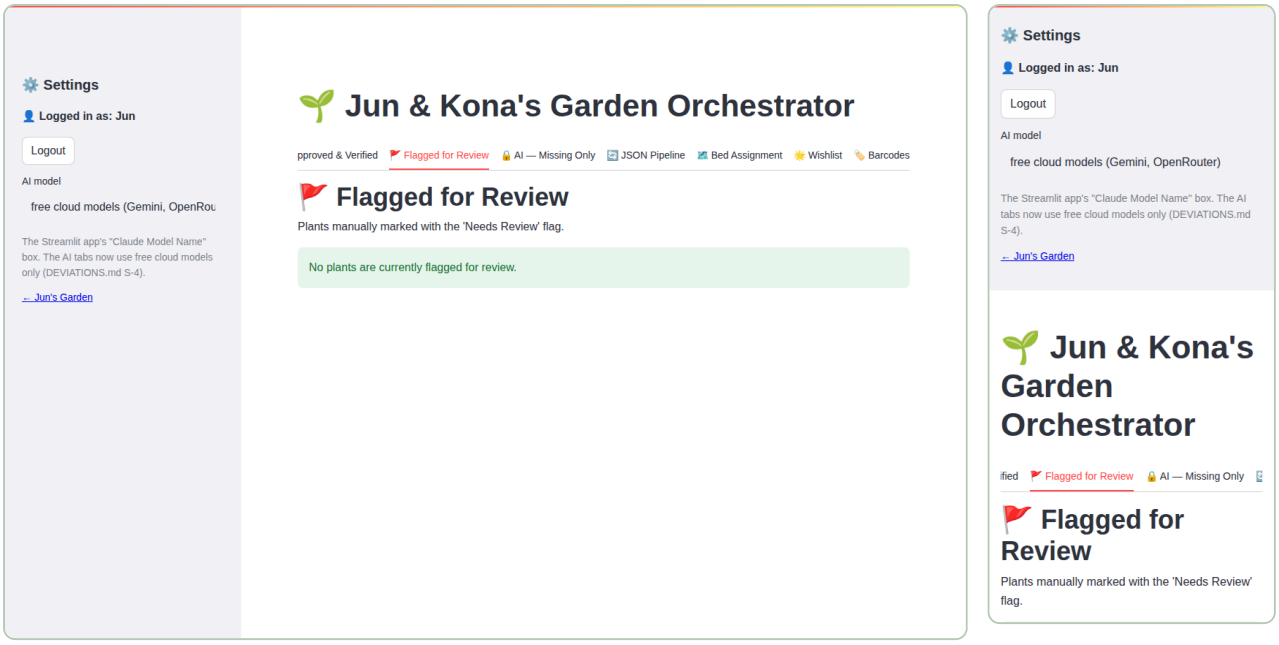

2. 🔍 **Awaiting Approval:** plants whose facts are complete but that wait for the sign-off of the author and/or Jun (section 14 of the editor). Two inner tabs: 🌷 **Perennials** and 🌻 **Annuals**.

3. 🏆 **Fully Approved & Verified:** the complete plants that both have signed off: the print-ready catalogue. The same two inner tabs.

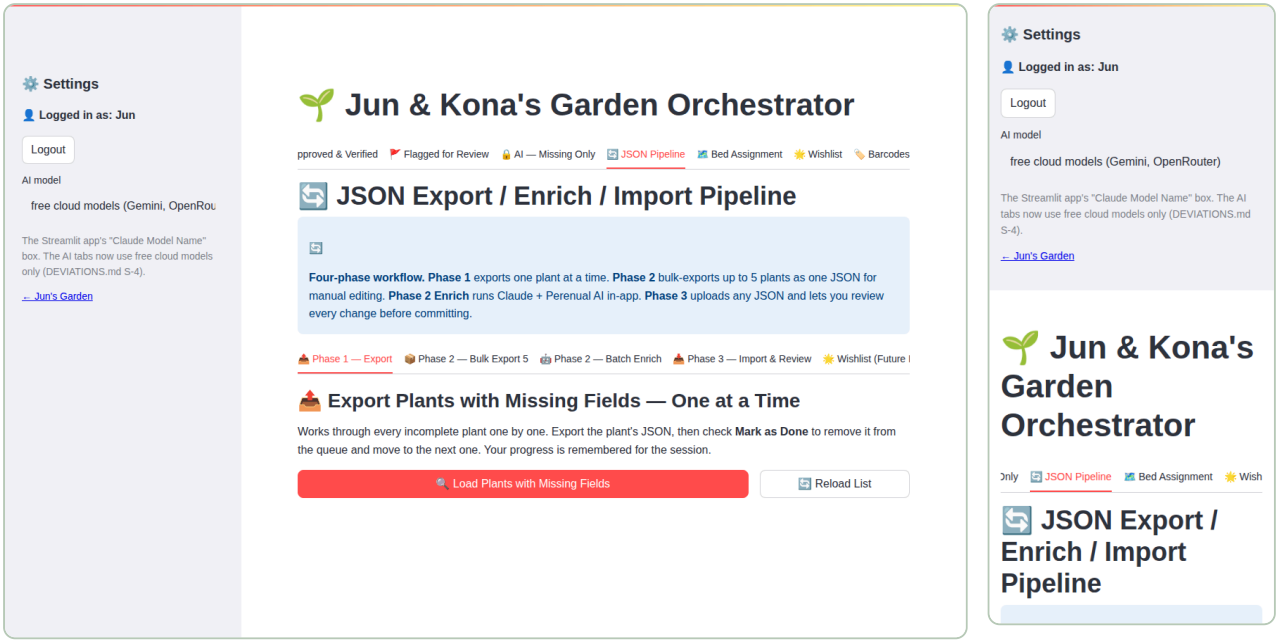

4. 🚩 **Flagged for Review:** plants someone marked with ⚠️ **Flag Entry for Further Technical Review** in the editor. Fix them here (**Edit a Flagged Plant**) and take the flag off.

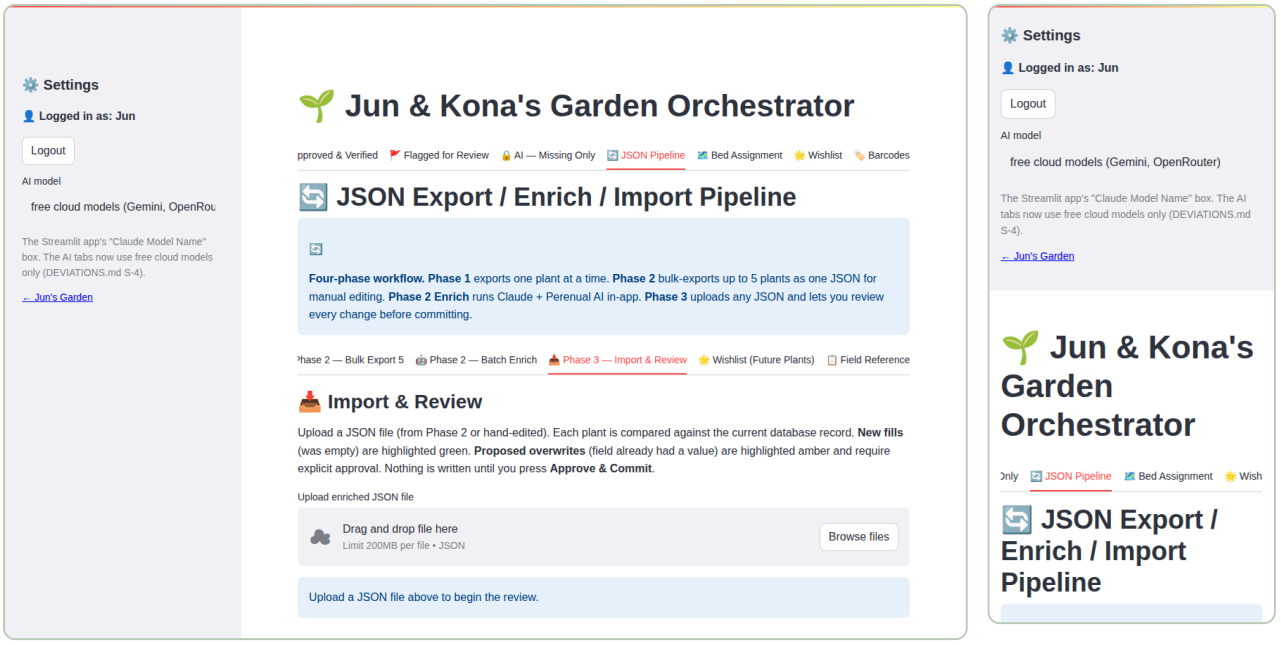

10.3 The JSON Pipeline (many plants at once)

A JSON file is a plain text file of plant facts. The pipeline lets you take plants out, fill them in (by hand, or with an AI on another computer) and bring them back, checking every change.

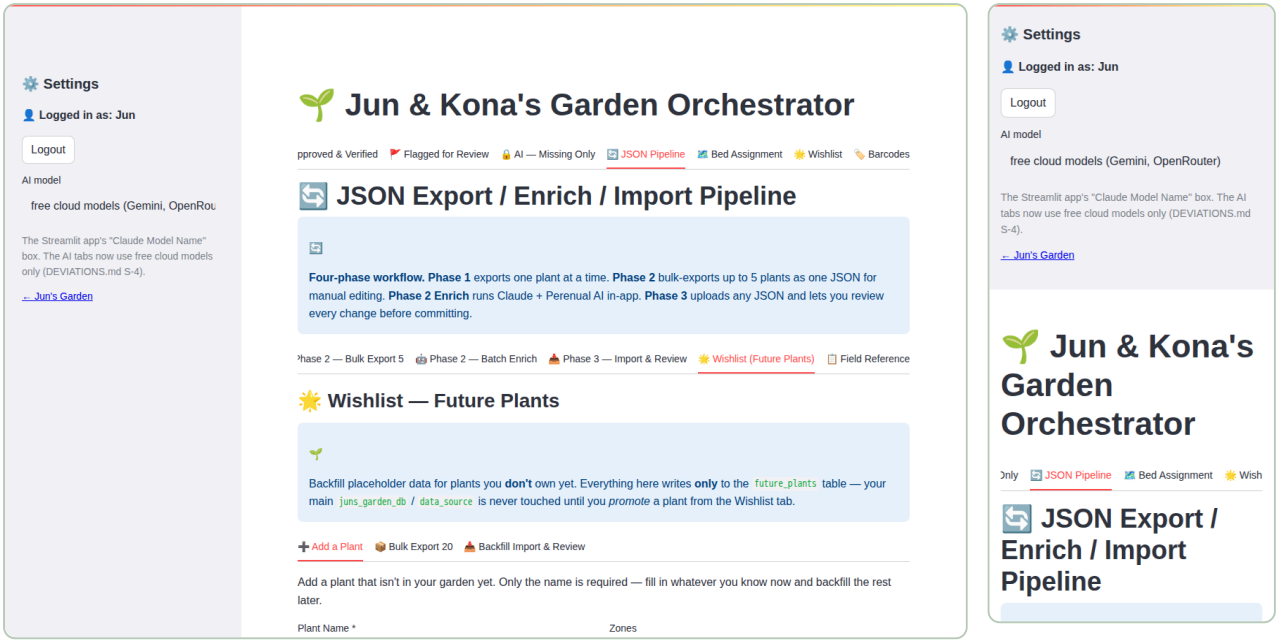

1. 📤 **Phase 1 — Export:** the plants with missing facts, one at a time. Download one, then tick **Mark as Done** to go to the next.

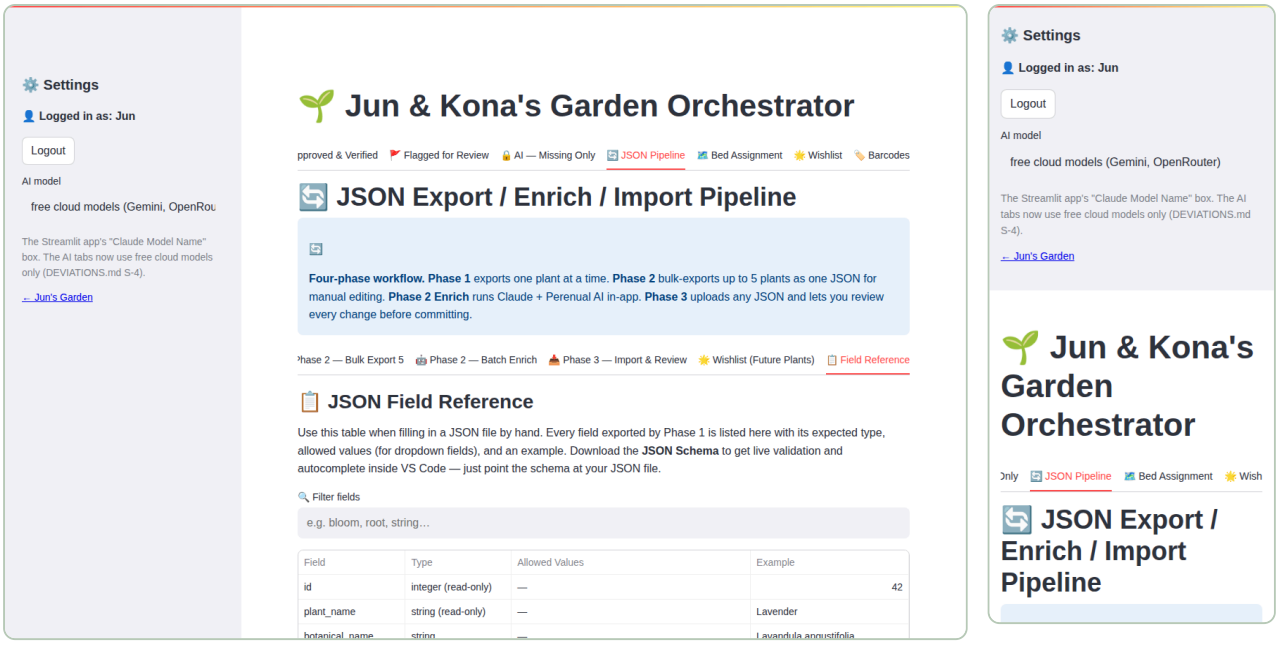

2. 📦 **Phase 2 — Bulk Export 5:** pick up to five plants and download them as one file.
3. 🤖 **Phase 2 — Batch Enrich:** the AI fills the missing facts of many plants at once (it never changes facts that have a value). 🌐 **Include web search** and ⚡ **Parallel workers** set how; 🚀 **Start Batch Enrichment** starts it.
4. 📥 **Phase 3 — Import & Review:** upload a file. Every plant is compared with what you have: new facts are **green**, changes to a fact that already has a value are **amber** and need your yes. Nothing is written until you press **Approve & Commit**.

5. 🌟 **Wishlist (Future Plants):** the same for the wish list, in three inner tabs: ➕ **Add a Plant** (only the name is needed), 📦 **Bulk Export 20** and 📥 **Backfill Import & Review**. It only changes the wish list, never your garden's plants.

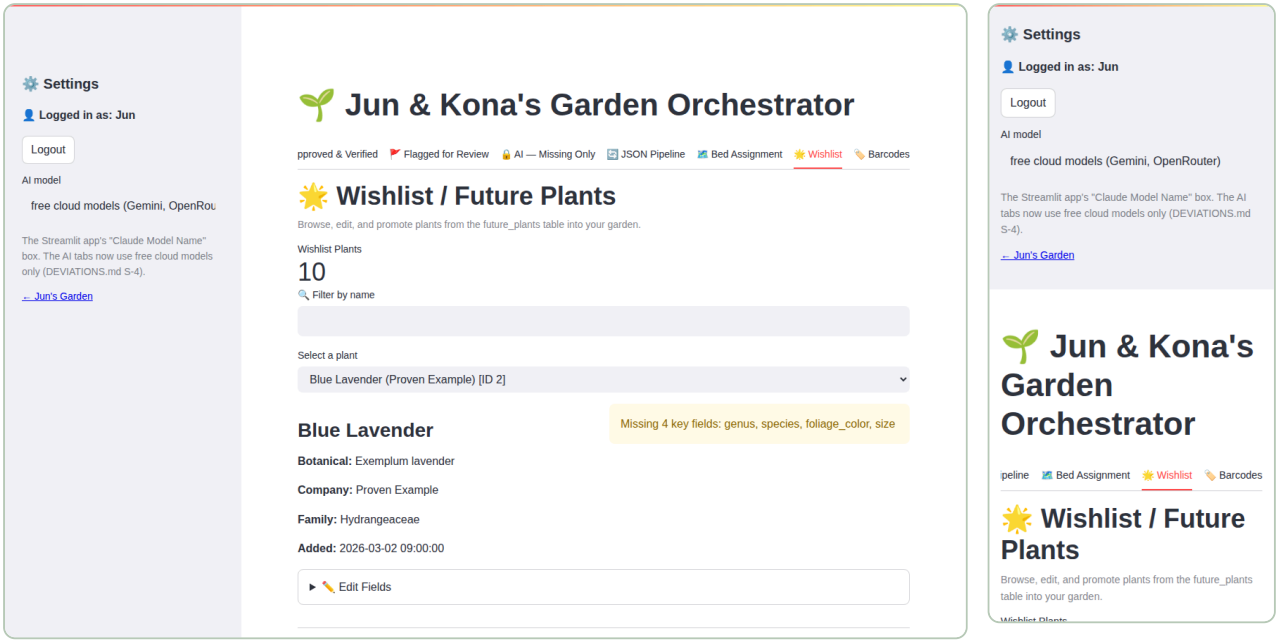

6. 📋 **Field Reference:** every fact a file can hold, its kind, the allowed values and an example. 🔍 **Filter fields** finds one.

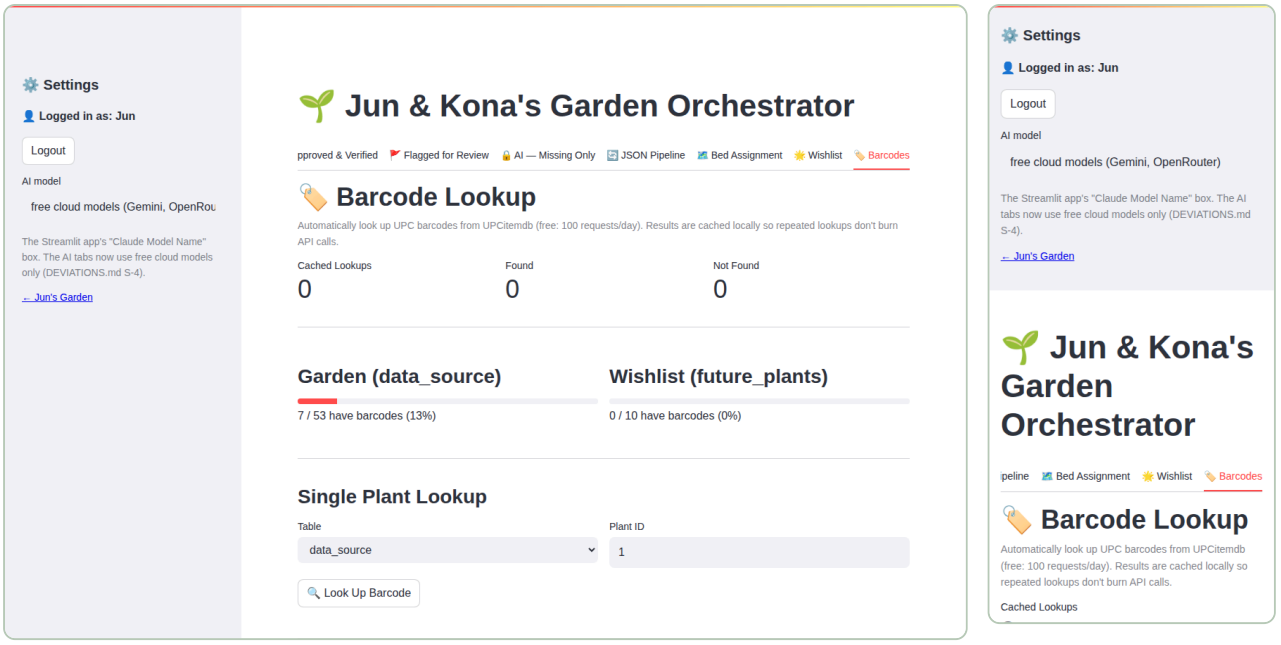

10.4 Bed Assignment, Wishlist, Barcodes

1. 🗺️ **Bed Assignment:** chapter 11.
2. 🌟 **Wishlist:** the plants you want. 🔍 **Filter by name**, pick one, and see what is missing. ✏️ **Edit Fields** changes it, 🌱 **Promote to Garden** moves it into your garden when you buy it, 🗑️ **Remove from Wishlist** deletes it. 📋 **Full Wishlist Table** shows them all.

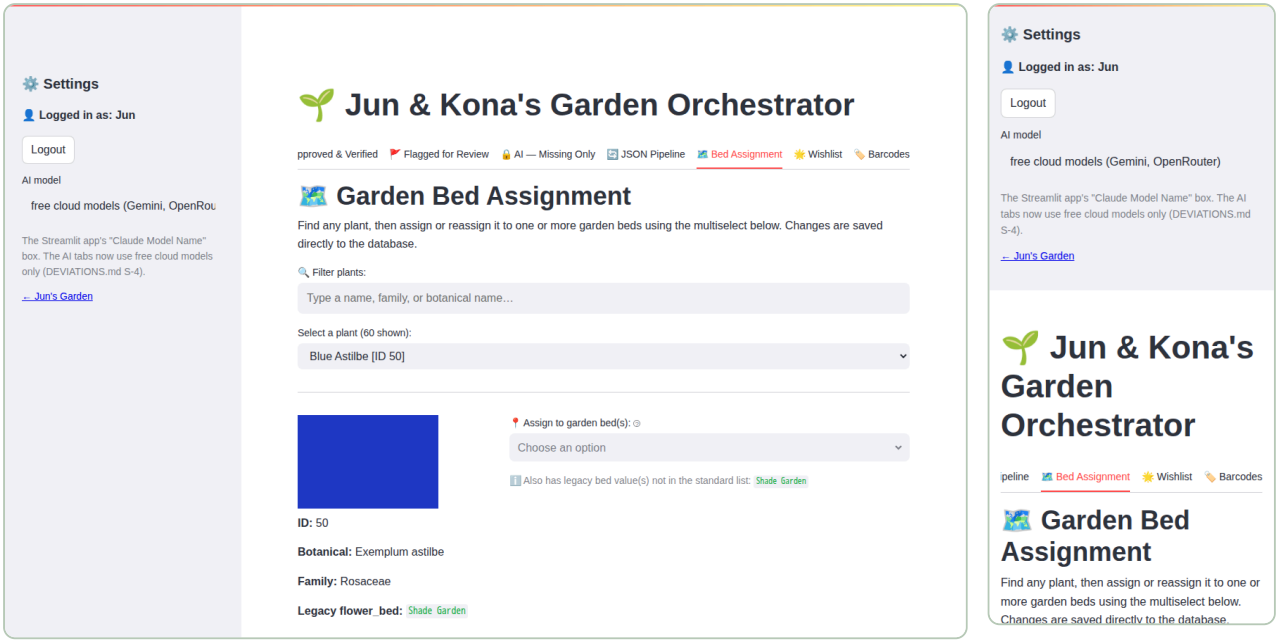

3. 🏷️ **Barcodes:** looks up the barcode (UPC) on a plant's pot or tag in a free online list (100 look-ups a day; each answer is kept, so it is asked only once). **Single Plant Lookup**: choose the garden or the wish list, type the plant's ID, 🔍 **Look Up Barcode**. **Batch Lookup**: many plants without a barcode, 🚀 **Start Batch Lookup**. The phone app's **Barcode** button uses these.

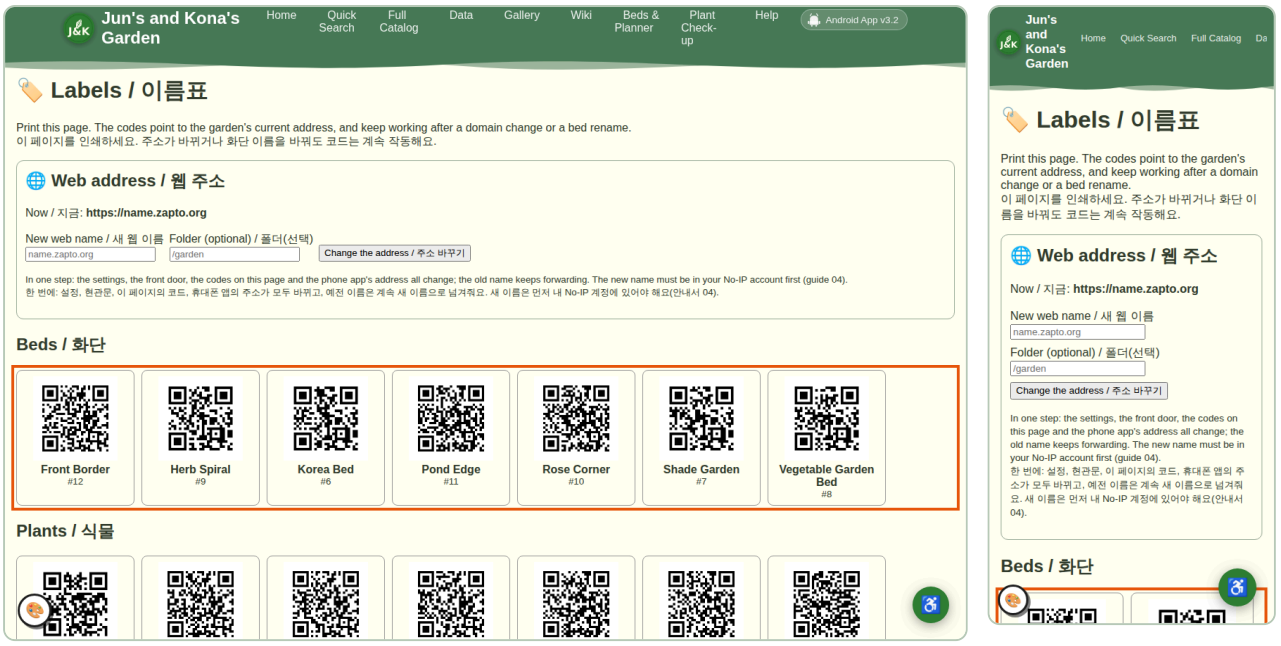

11. Beds and bed labels (QR codes)

1. 🗺️ **Bed Assignment** (admin tab) puts plants into beds: tick the beds for each plant and save.

2. **Labels**: open `/labels` (signed in). Every bed and every living plant has a label with a QR code. Print the page and cut the labels out. Scanning a label opens that plant or bed on the website.

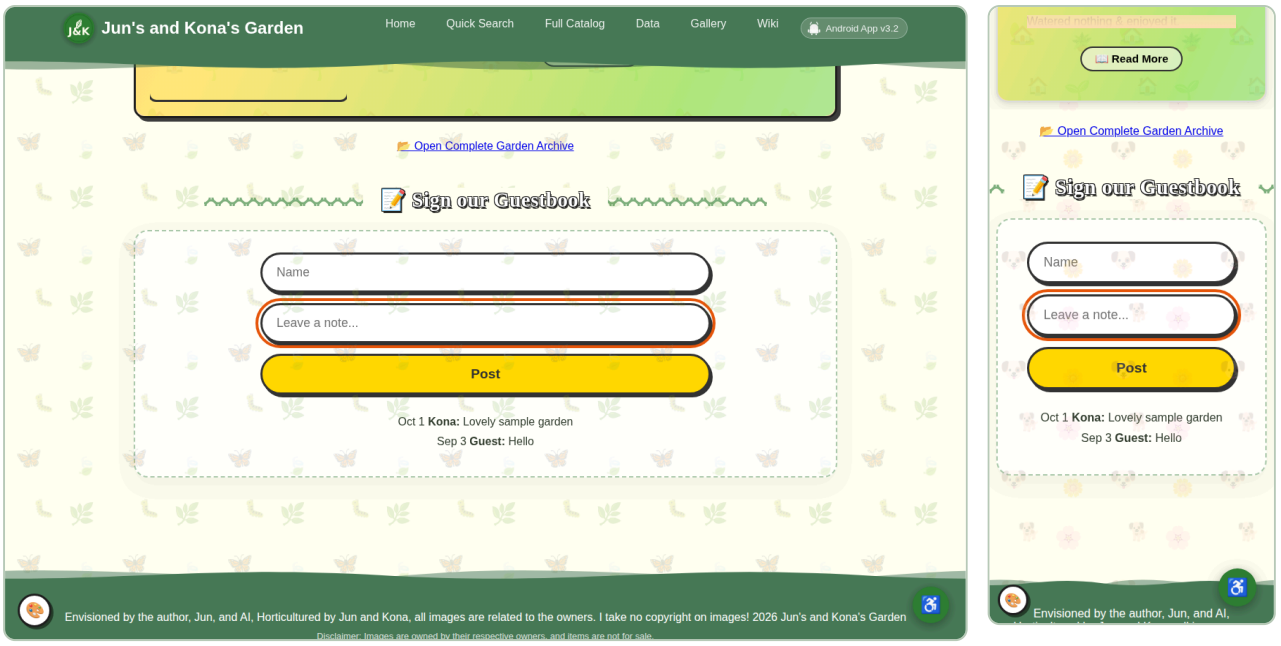

The codes keep working when you rename a bed or change the garden's web address.

More about beds and labels

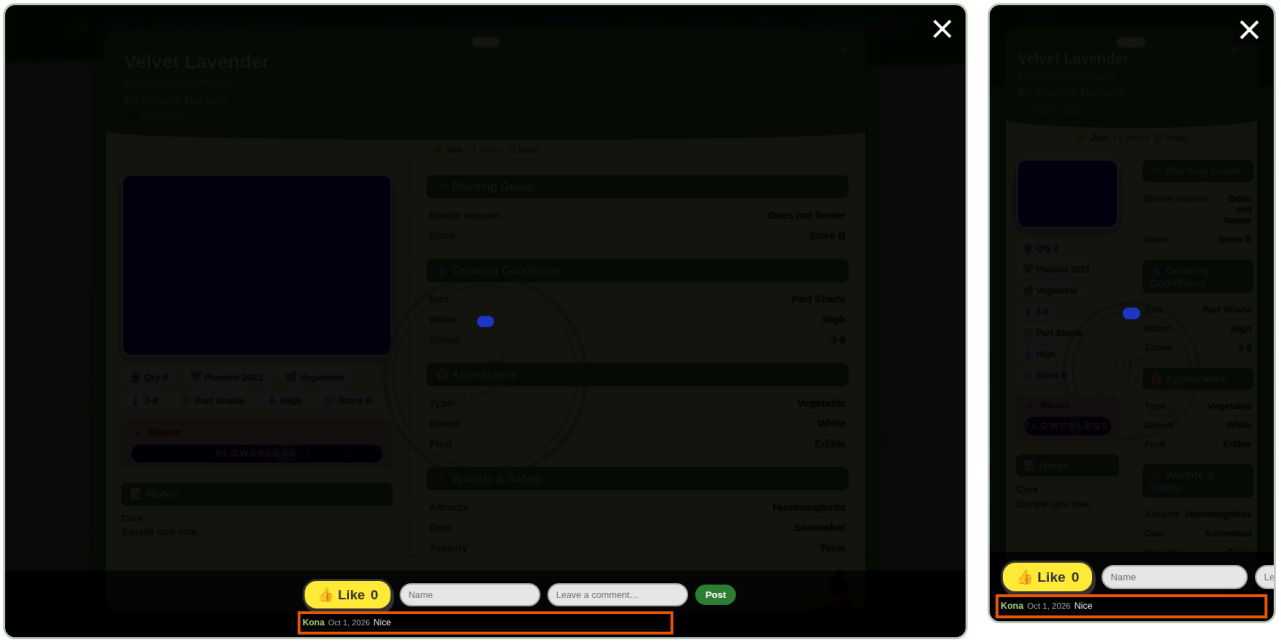

- In 🗺️ **Bed Assignment**, 🔍 **Filter plants** narrows the list by name, botanical name or family. A plant can be in several beds. A plant with no bed is in **To Be Sorted**.
- The labels page lists **Beds** (with their number) and **Plants** (with their bed). The codes are short addresses: `/q/<number>` opens a plant and `/b/<number>` a bed. The numbers never change, which is why printed labels keep working.
- The bed buttons of the Full Catalog (section 4.5) and the bed list in its Add / Edit box are written into the catalogue page itself. A new or renamed bed is added there by changing that page (guide 11 in **Help** explains how to change a page safely).
- **Beds & Planner** (top bar, signed in) opens the garden tools, a separate part that is switched on in the garden computer's menu (9, then 1): the **bed planner** (draw a bed and drag plants into it; placing a plant also sets its bed), **plant check-up** (a photo of a plant; the AI says what it sees), **diagnose**, **tag scan** (a photo of a nursery tag; the details wait for your yes), **spending** (a photo of a receipt), **wiki drafts** and **review** (say yes or no to each proposed value). They open behind your sign-in page.

12. Comments and the guestbook

1. **Guestbook**: at the bottom of the home page anyone can leave a short message.

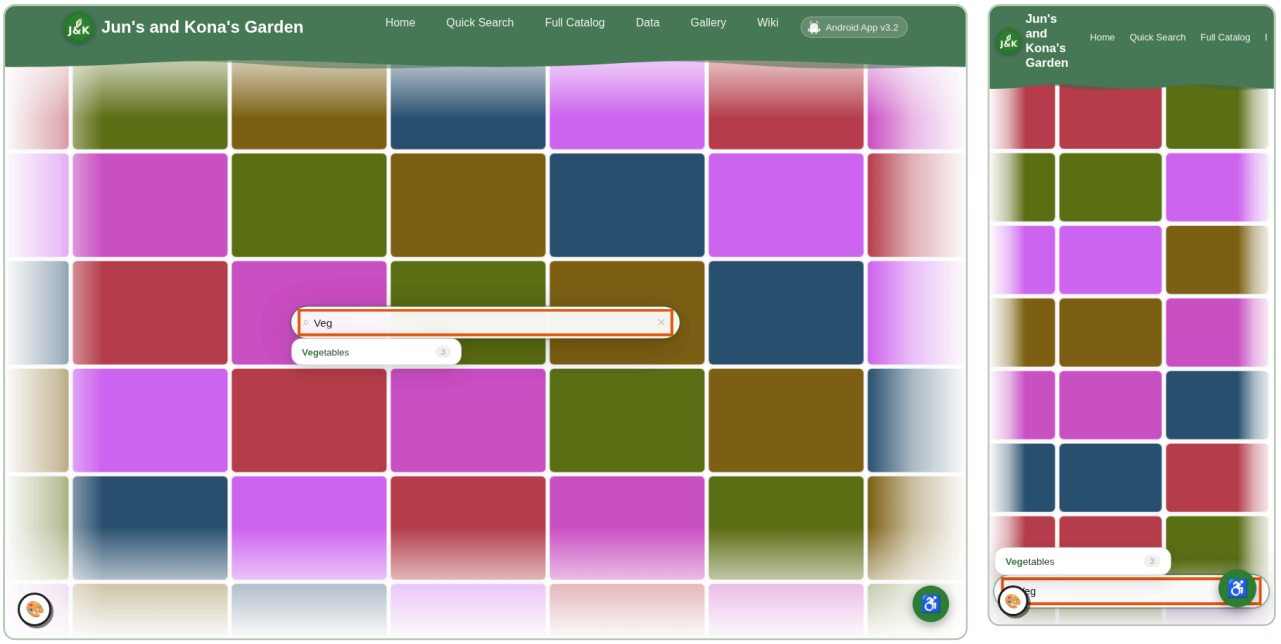

2. **Plant comments**: in a plant's window, tap its photo. Under the big photo are the comments and a box to write one. You get a little bell on the admin pages when someone comments.

A guestbook message has a name (up to 20 letters) and a note (up to 100). Signed in, each message has ✖ to delete it.

13. The Gallery

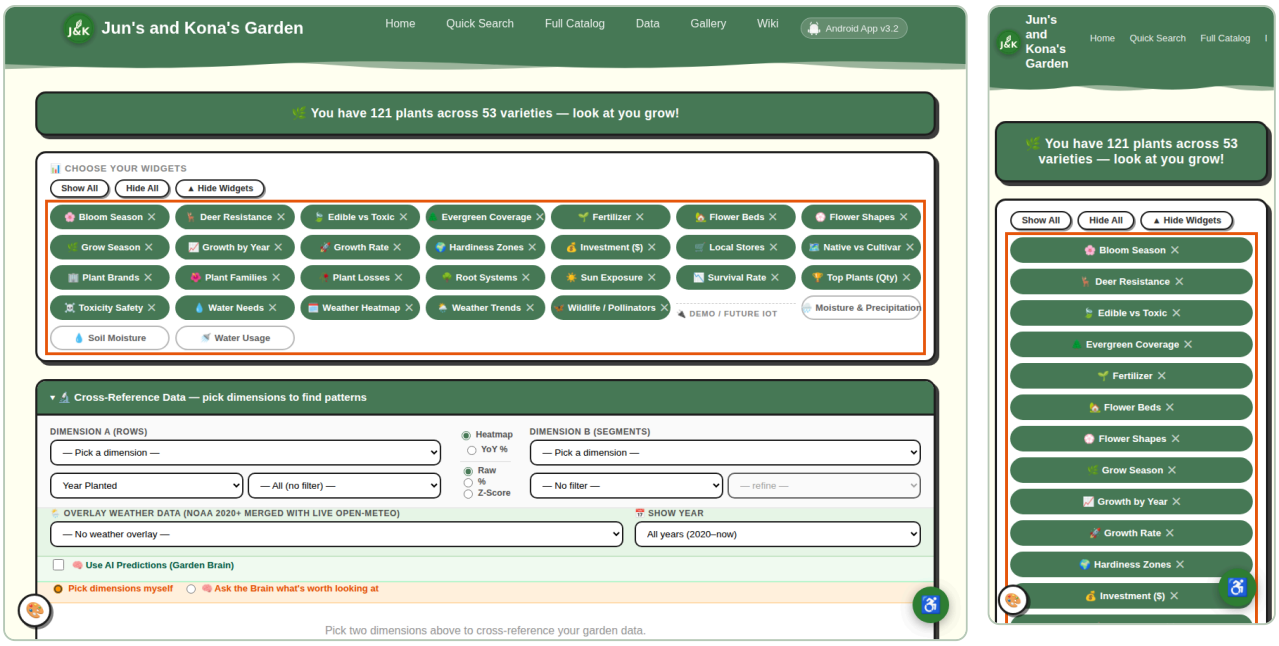

1. **Gallery** is a slowly moving wall of all the garden's photos (and videos). Click a photo to see it large, with ‹ › for the next one and its comments underneath (anyone can add one, with a name).
2. **Add a tag…** in the middle searches the photos by their tags. Type a few letters and choose a tag from the list: the wall shows only those photos. Add more tags to narrow it further (a photo must have all of them). ✕ clears the search.

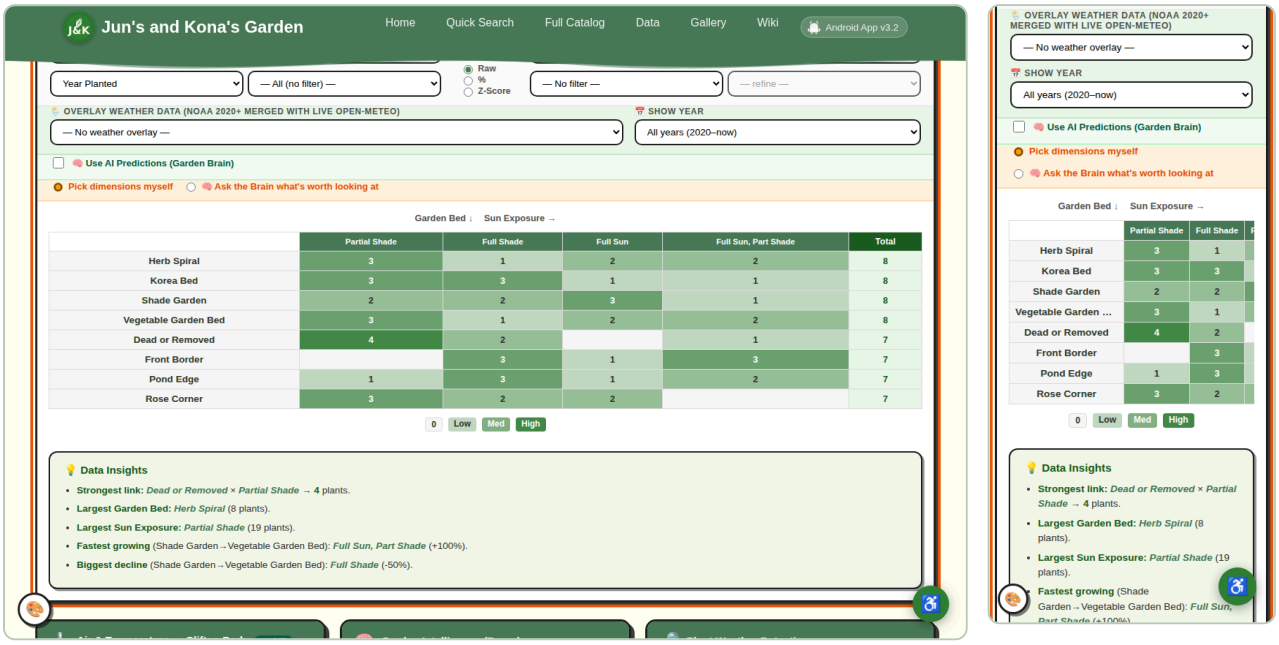

14. The Data page

Data turns your garden into charts.

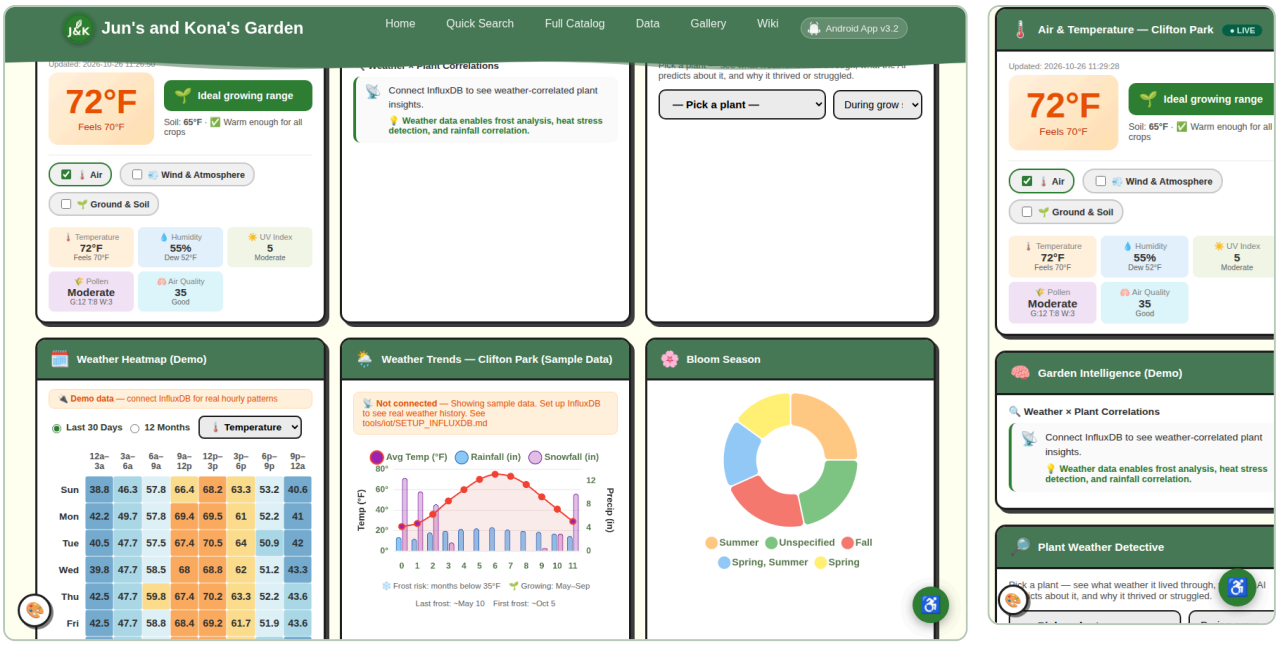

1. 📊 **Choose Your Widgets:** every chart has a chip. Tap a chip's ✕ to hide that chart, **Show All** / **Hide All** for all of them, ▲ **Hide Widgets** to fold the chips away. The charts include bloom season, deer resistance, edible vs toxic, evergreen coverage, fertilizer, flower beds, flower shapes, grow season, growth by year, growth rate, hardiness zones, investment ($), local stores, native vs cultivar, plant brands, plant families, plant losses, root systems, sun exposure, survival rate, top plants (by quantity), toxicity safety, water needs, the weather heatmap and trends, and wildlife and pollinators. The 🔌 **Demo / Future IoT** charts (moisture, soil moisture, water usage) show made-up numbers until garden sensors exist.

2. 🔬 **Cross-Reference Data:** pick two things to compare, **Dimension A (rows)** and **Dimension B (segments)**, for example **Garden Bed** × **Sun Exposure**. The table counts the plants in each pair; darker green = more. Choose **Heatmap** or **YoY %** (the change from year to year), and **Raw**, **%** or **Z-Score** (how unusual a number is). The small boxes under each dimension filter the table (for example only one year). You can lay weather over it (**Overlay Weather Data**, **Show Year**) or tick 🧠 **Use AI Predictions**. 💡 **Data Insights** under the table says what stands out.

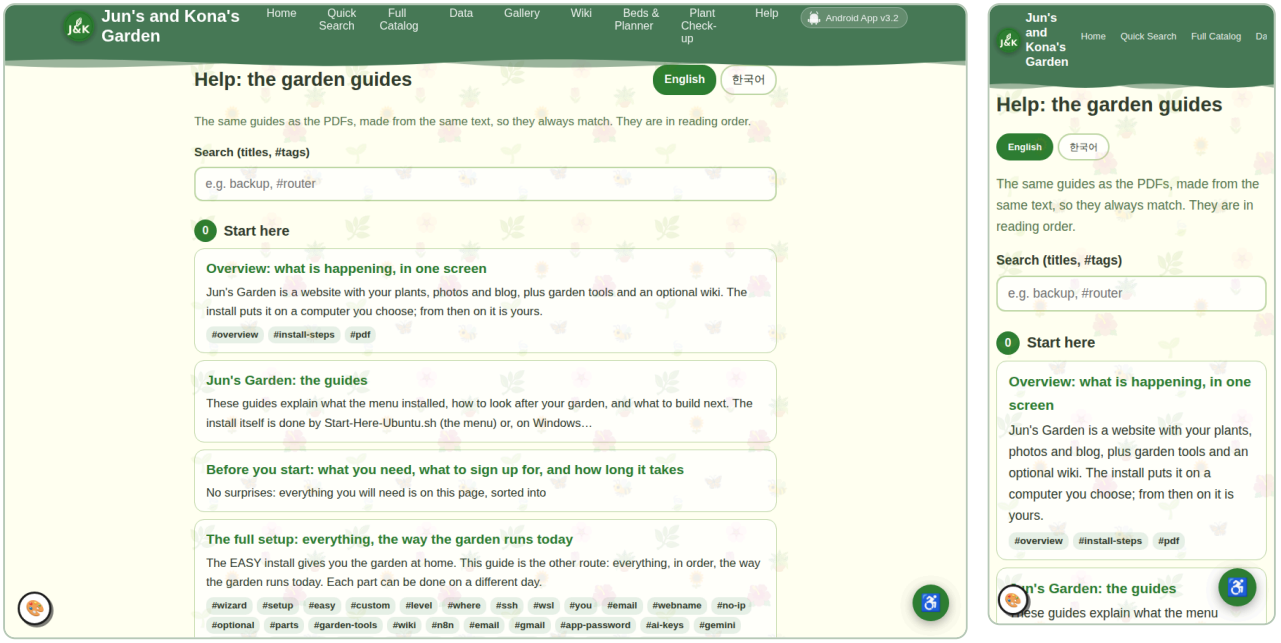

3. **The weather cards: Air & Temperature** (now), **Garden Intelligence**, **Plant Weather Detective** (pick a plant: the weather it lived through and what the AI makes of it), the **Weather Heatmap** and **Weather Trends**. Cards marked **Demo** or **Sample Data** show example numbers until the weather history is connected.

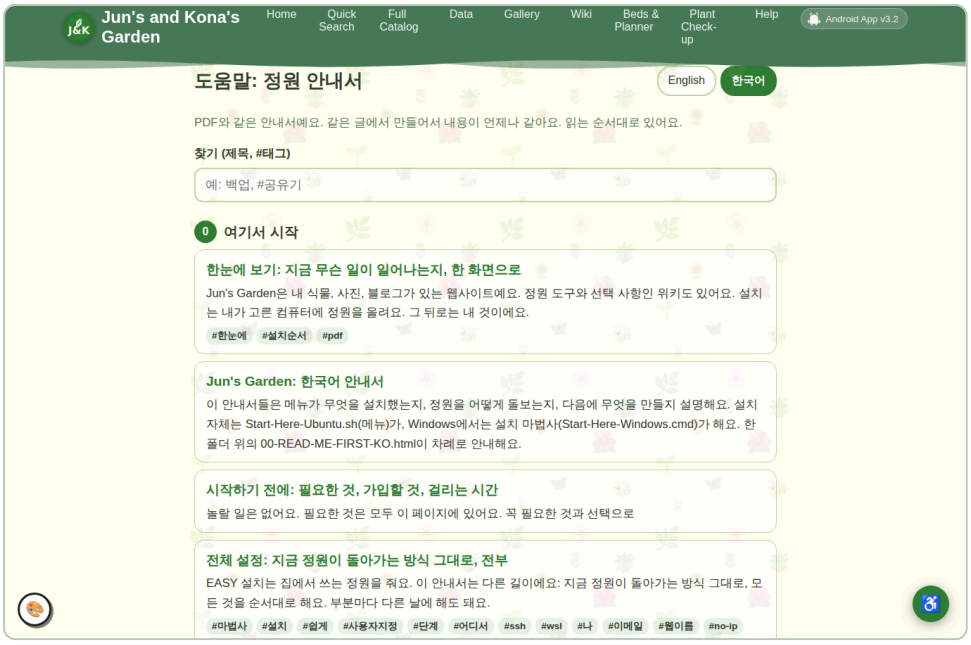

15. The Help pages

1. **Help** (top bar, signed in) has every guide that came with the garden, in reading order: the same text as the PDF guides. **English** / **한국어** at the top switches the language.

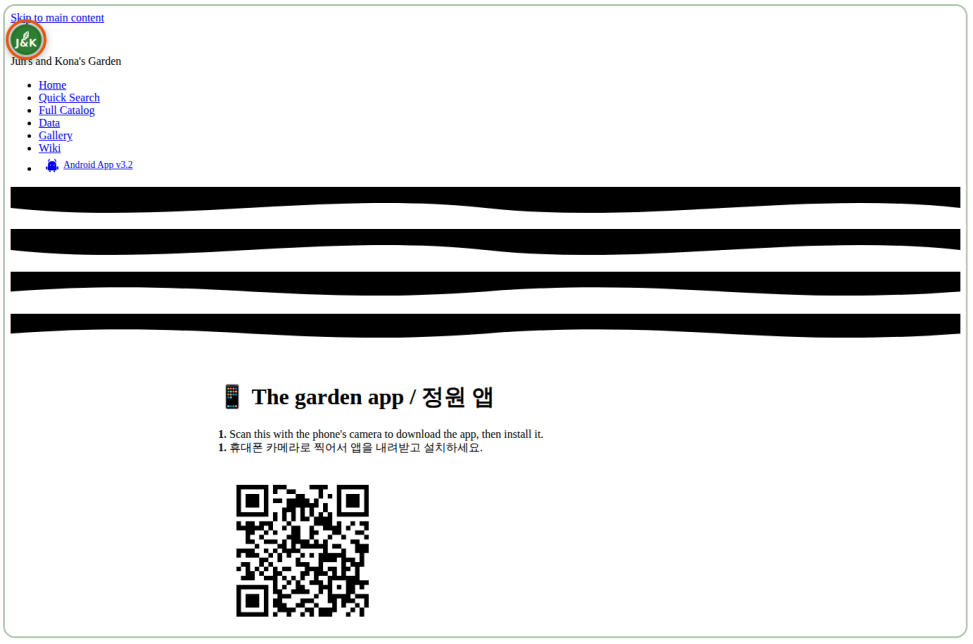

2. **Search (titles, #tags)** finds a guide: every word you type must be in its title, its summary or its #tags. Guides **19, Every menu option** and **25, Common questions** are good places to start.

16. The phone app

1. On the computer, open `/app/setup`. It has two codes.

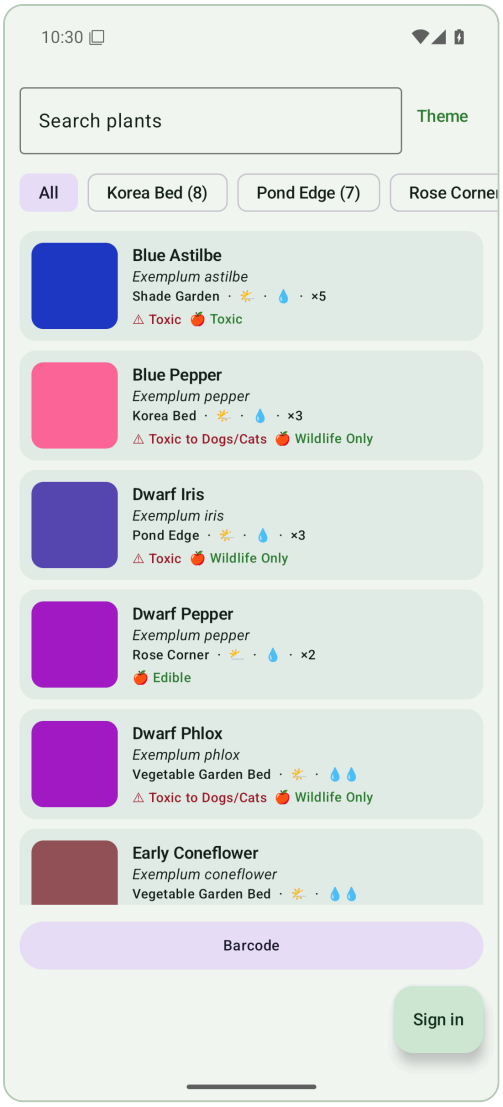

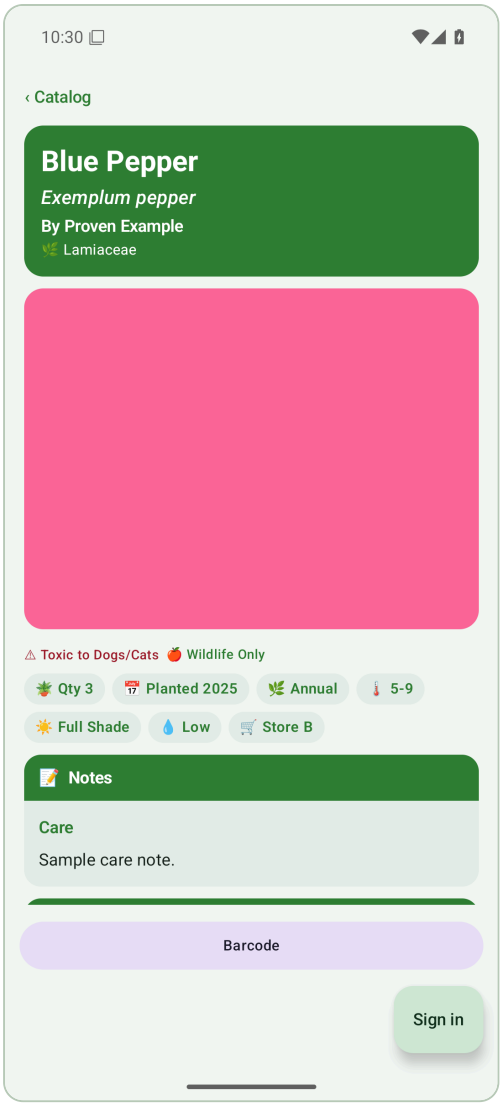

2. On the phone, scan the **first** code: it downloads the app. Install it (the first time, Android asks you to allow installs from your browser: say yes).
3. Scan the **second** code: the app learns your garden's address. It says so at the bottom of the screen.
4. Open the app. Sign in with your garden name and password, or choose **Continue as guest** to look.

5. The catalogue: search at the top, beds below it, then the plants. Tap a plant to open it.

6. A plant: its photo, the facts in groups, and the notes. ‹ **Catalog** goes back.

7. Along the bottom (signed in): **Identify** (photo of a plant), **Tag** (photo of a plant tag), **Barcode** (photo of a barcode) and **Receipt** (photo of a receipt).
8. When there is a new version, the app offers **Update**.

The app speaks English and Korean. It follows the phone's language, or choose one for this app only: Settings, Apps, Jun's Garden, Language.

More about the app

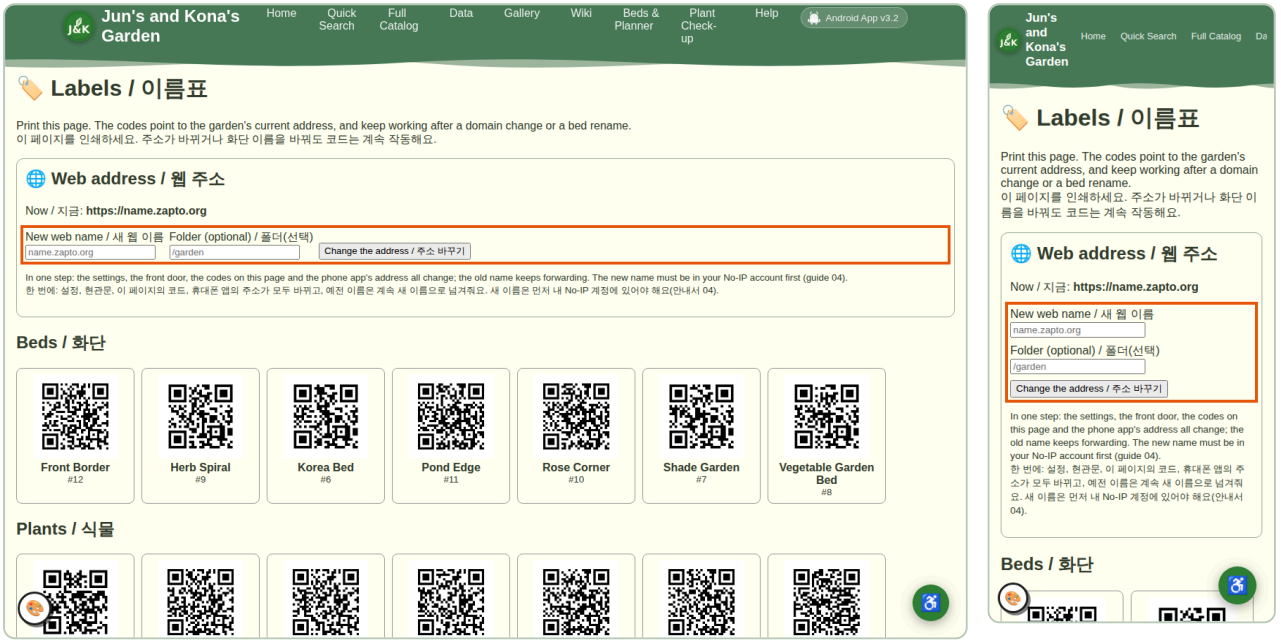

- **The catalogue** shows the living plants that have a photo. **Search plants** looks in the name, botanical name, family, bed, company and genus; one letter alone shows the names that start with it. The bed chips (**All** and each bed) show one bed.
- **Theme** (next to the search box) opens **Appearance**: **Light or dark** (Match phone, Light, Dark) and seven colour themes (Evergreen, Forest, Ivy, Lavender, Sunflower, Sunrise, Sunset).
- **A plant** shows the same groups as the website's plant window: Planting Guide, Root System, Growing Conditions, Appearance, Wildlife & Safety, and the notes.

- **Guests** can browse and use **Barcode**; the other camera tools need you to sign in (the button at the bottom right shows **Sign in**, or your name to log out).
- **Identify:** photograph a plant; the app says what it might be, what is visible, and whether it is **in your garden**.
- **Tag: One now** reads one tag straight away, then asks for **the back** of the tag (**Take the back** or **Just the front**). **Many at once** lets you photograph a whole tray first, then **Pick photos** (**Front then back** or **Fronts only**) and **Queue N tags**: they are read afterwards, so you can put the phone down. What a tag says waits for your approval (**review** in the garden tools, chapter 11) before it changes a plant.
- **Barcode:** finds the plant with that barcode, or says **Nothing in the garden has this barcode yet**.
- **Receipt:** photograph a shop receipt; the plant lines are matched to your plants and the amount is recorded (**Spent: $...**).
- **Update:** when a new version is ready, **Update available** offers **Update** or **Later**. The app checks that the download arrived whole before it installs it.
- When the free AI is busy, the app says so and keeps the photo for later.

17. Changing the garden's web address

One step does everything: the address the garden uses, the labels, the phone app, and the old address keeps forwarding to the new one, so printed labels and old phones keep working. First add the new name to your No-IP account.

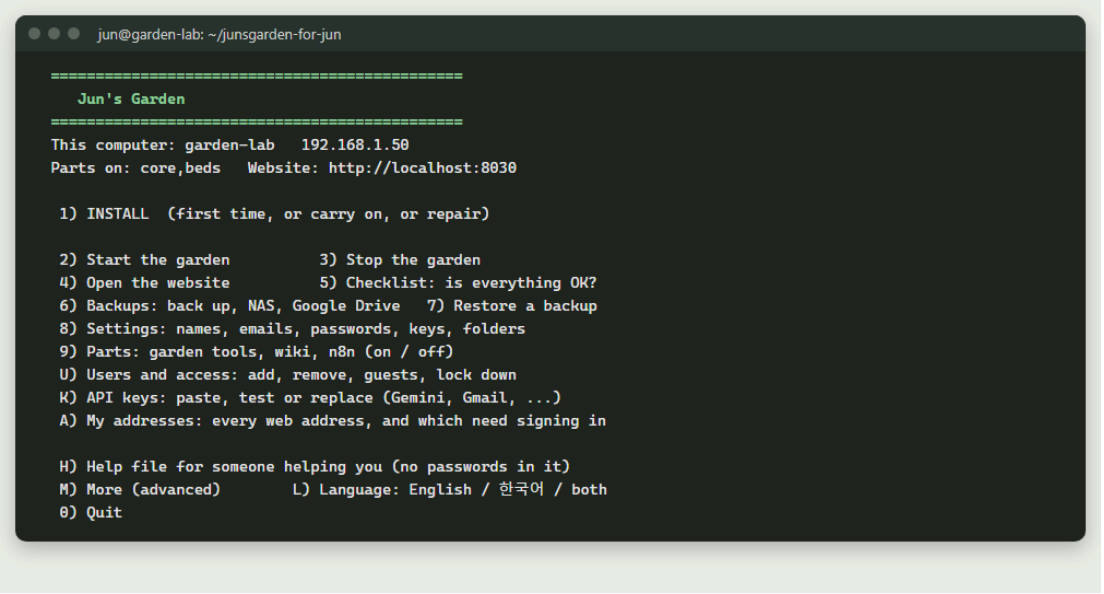

1. Signed in, open `/labels`. In **Web address**, type the new web name (and a folder if you want one) and press **Change the address**. Within a minute the page says it changed.

2. Or on the garden computer: `bash garden.sh webname new.name.org` (the menu: M, then 16), or the Windows setup wizard's last page: **Change the web address**.

18. The garden computer: menu, backups and settings

Everything the website does not do is done on the garden computer, in its menu: type `bash garden.sh` in the garden folder (on Windows: **Garden-Menu-Windows.cmd**). Type a number or a letter and press **Enter**; **0** goes back. **L** switches the menu between English, Korean and both. Every choice is explained in guide **19, Every menu option** (Help, chapter 15).

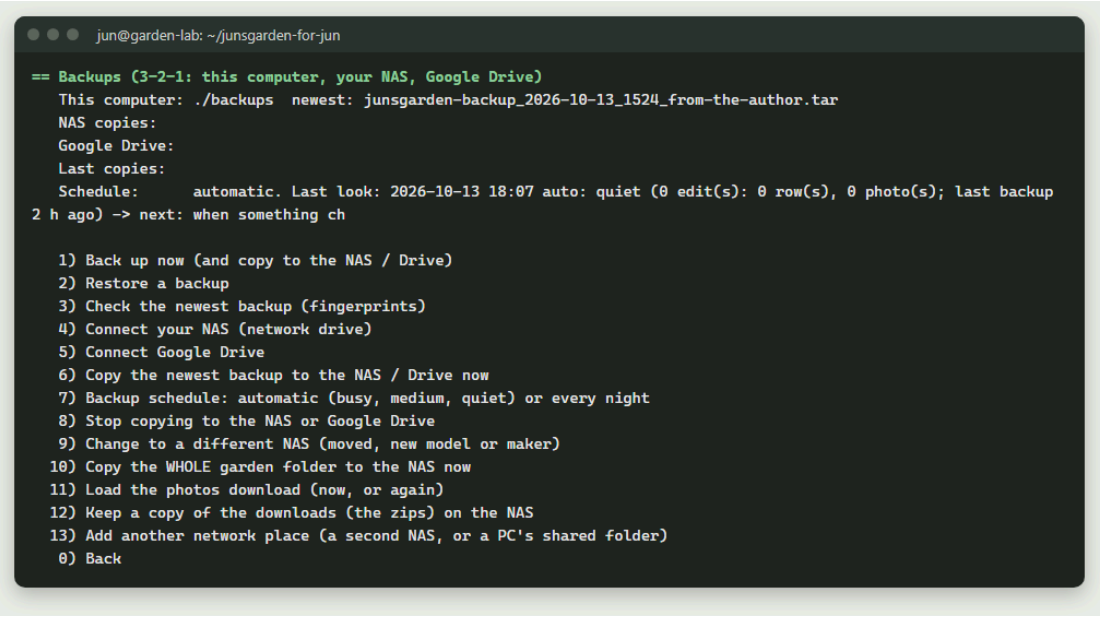

18.1 Every day

- **2 / 3:** start or stop the garden. **4:** open the website.
- **5) Checklist: is everything OK?** checks every part and says what to do when something is wrong.
- After a power cut or a restart the garden starts by itself (guide 25, Common questions).
- **M, then 14** (on / off) has the automatic check-up: when it is on, every 6 hours it starts again any program that got stuck.

18.2 Backups (menu 6)

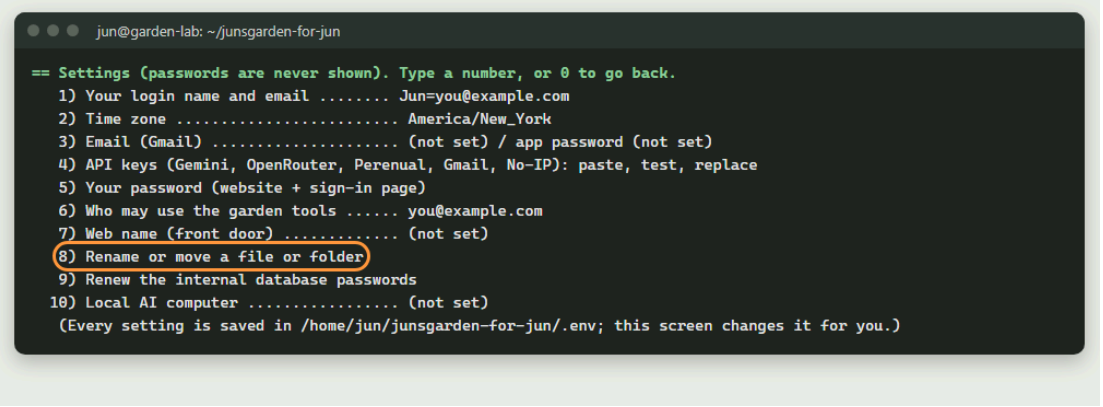

Every backup is one `.tar` file in the `backups/` folder: the database (plants, comments, logins), every photo, the guestbook and comments, the AI's saved answers, and a fingerprint of each piece. Its name says the date, the time and who made it.

1. **Back up now:** menu **6**, then **1** (a minute or two). Backups you make yourself are never deleted for you.
2. **Automatic backups** run by themselves: more often when the garden is busy, at least once a week (menu **6**, then **7** chooses automatic or every night).
3. **Keep three copies:** on the garden computer, on your NAS (**6**, then **4**) and on Google Drive (**6**, then **5**). A second NAS or a PC's shared folder: **6**, then **13**.
4. **Check the newest backup:** **6**, then **3** (or `bash garden.sh verify`).
5. **Restore:** menu **7**. Pick a backup from the list. The garden first makes a `before-restore` backup, so you can always go back.

Guide **13, Backups, restoring, and folder names** has all the details.

18.3 Settings (menu 8), people (U), keys (K) and more

- **8) Settings:** your login name and email, the time zone, the email that sends password links, your password, who may use the garden tools, the web name, renaming a file or folder safely, the database's own passwords, and a local AI computer.

- **U) Users and access:** who can sign in; add a person who may edit, or a guest who may only look; remove a person; change a password; sign everybody out; and **LOCK DOWN** (only you, new passwords).
- **K) API keys:** paste, test or replace the keys for the free AI (Gemini, OpenRouter), the plant data (Perenual), Gmail and No-IP.
- **9) Parts:** switch the garden tools (/beds), the wiki and n8n on or off.
- **M) More:** the front door (HTTPS and your sign-in page), printing labels (**M**, then **19**), setting up the phone app (**M**, then **20**), the web address (**M**, then **16**), logs, rebuilding, and switching the whole garden off or on (**M**, then **14**).

19. Coming soon

These two parts are being built now. They will be filled in, with pictures, when they are ready.

19.1 Adding a plant with the garden's own AI, and the Approve button

> **Placeholder, to be filled in.** A new way to add a plant: the garden's own AI (running on your own computer, not on the internet) researches the plant and fills in its facts, and nothing is saved until you press **Approve**. The steps and pictures will be added here when that update is finished.

19.2 The best main photo and focus point, chosen for you

> **Placeholder, to be filled in.** A tool that looks at all of a plant's photos, picks the best one as the main photo and sets its focus point, so you only have to check it (you can still change both by hand, section 4.11). The steps and pictures will be added here when that update is finished.
